

THIRTY FIRST YEAR

LANCASTER, KY., THURSDAY AFTERNOON, DECEMBER 16 1920.

NUMBER 33.

NOBEL PRIZES ARE PRESENTED Message From Wilson Read At Exercises

IN HOUSE OF PARLIAMENT
IN CHRISTIANIA

(Associated Press)

Christiania, Norway.—Presentation of the Nobel Peace Prizes for 1919 and 1920, which have been awarded, respectively, to Leon Bourgeois of France and Woodrow Wilson, President of the United States took place there today. Formal announcements of the awards was made recently.

A message from President Wilson to be read upon the presentation of the 1920 prize had been received by Albert G. Stenroos, American Minister to Norway, and was read by him during the ceremony.

The exercises took place in the presence of members of the parliament in the House of Parliament, many foreign diplomats being in attendance. J. G. Lockwood, former President, spoke in honoring the prizes to the French and American Ministers who were introduced by the Speaker of the Chamber, A. V. Johnson Huen.

The last time the Norwegian Parliament in session awarded the Nobel Prize was in 1909, when the late Theodore Roosevelt received the honor. On that occasion, American Minister Pierce received the prize on behalf of Mr. Roosevelt and gave thanks. The prize was presented by the committee, read a message from the then American President.

\$29,100 In American Gold

New York. (Associated Press).—Award of the Nobel Peace Prize recently to President Wilson has the person who has presented it, or best the fraternity of it, but the abolition of standing armies, and the formation and increase of peace congresses," marks the sixteenth bestowal of the gift of the Swedish inventor of dynamite, Alfred H. Nobel, whose name it bears. President Wilson is the third American to receive the peace prize, the others being Theodore Roosevelt and Elihu Root.

The prize one-fifth of the annual interest on about \$29,000,000 left for the purpose by Mr. Nobel, nominally amounts to about \$40,000, but is payable in Swedish kroner, which at the present rate of exchange, represents about \$29,100 in American gold. A kroner in the United States at present has a value of only 10 1/2 cents as compared to its normal value of nearly 27 cents. Recipients in countries where the kroner is above par, however, will receive much more than the amount stipulated.

Knut Hamsun of Norway, winner of the Nobel Prize for literature, thus will receive \$48,000, and a German award would make the recipient in that country almost a millionaire.

Vast Work Ahead Says Wilson.

Washington. (Associated Press).—President Wilson, in his letter accepting the Nobel peace prize, which was read recently at the presentation ceremonies at Christiania, said that if this were the last peace prize to be offered he could not accept it "for mankind has not yet been rid of the unspeakable horror of war." In the years to come, the President added, there will be "abundant opportunity for others to distinguish themselves in the crusade against hate and fear and war."

"In accepting the honor of your award," said the President's letter, "I am moved not only by a profound gratitude for the recognition of my earnest efforts in the cause of peace, but also by a very poignant humility before the vastness of the work still called for by this cause."

"May I not take this occasion to express my respect for the far-sighted wisdom of the founder in arranging for a continuing system of award? If there were but one such prize or if this were to be the last, I could not of course accept it. For mankind has not yet been rid of the unspeakable horror of war. I am convinced that our generation has, despite its wounds, made notable progress. But it is the latter part of wisdom to consider our work as only begun. It will be a continuing labor. In the indefinite course of years before us there will be abundant opportunity for others to distinguish themselves in the crusade against hate and fear and war."

"There is indeed, a peculiar fitness in the grouping of these Nobel awards. The cause of peace and the cause of truth are of one family. Even as those who love science and

TOBACCO GROWERS Meeting Saturday.

EVERYBODY INTERESTED IN
INVITED

The principle source of income to the farmers of Garrard county for the past few years has been from the tobacco crop. The information at hand that the prices that will be paid for tobacco will prove very disappointing when the sales take place in January and over the winter months. This price condition is being caused by two very serious things, namely, overproduction, second a lack of organization among the growers. Trade conditions with foreign countries is such at this time that our tobacco cannot find a way to the place of consumption. By an organization the outlet can be arranged to these markets. Until this is worked out our production must be reduced or the organization on the part of the business will purchase the crop at a price below the price to the growers. Another thing that must be kept before the growers is that the price of tobacco is being raised by the growers of tobacco and the trade of the world.

The Garrard Tobacco Growers Association has been brought into existence to solve or help to solve the various problems of the future of the tobacco growing industry. We have some confidence in the future of the tobacco industry in the plans offered by the association. In the name of the Garrard Tobacco Growers Association we are inviting the tobacco growers of Garrard county to meet at the Garrard Hotel, Saturday afternoon at 4:00 o'clock. We hope to have either Hon. W. Newman or Judge Hill present to explain the plans of the organization. This meeting is of vital interest to the growers of tobacco and you are invited and urged to come. J. E. Robinson, Chairman of the Garrard County Organization of the Garrard Tobacco Growers Association.

Why Ruin A

Good Ocean?

Tom Crumwell overheard two disgusted Kentuckians discussing the recent election.

"I wish some one would chuck that Bryan into the ocean," said the first Kentuckian.

"What's the use?" sighed the second Kentuckian. "He's so damn dry he'd float."—Lake Metake.

New President Is Tobacco Devotee.

Washington. When Senator Warren G. Harding moves into the White House next March he will bring with him his pipe, the first Presidential pipe since 1901.

If the moral reformers who seek to add another amendment prohibiting tobacco are looking to the next President for support, they probably won't get it, for Senator Harding is a devotee of Lady Nicotine. He is not an inveterate smoker, but he likes to puff upon a pipe while he is working in his study. He also smokes cigarettes occasionally, and chews when he feels like it.

Not since President McKinley has there been a smoker in the White House. Mr. McKinley was fond of his pipe. President Roosevelt, who succeeded him in 1901, did not smoke while he was President. Neither did President Taft. As for President Wilson, horrors!

Dixie Poultry Farm Wins At Armory.

The Dixie Poultry Farm of Bryantsville, Ky., owned by R. P. Brown and E. H. Burlett, made the following entries at the Big Armory Show at Louisville, Dec. 6-11, winning quite a bit of the money.

In white Plymouth Rocks they entered two Cocks, two pullets, one young pen and won 1st and 2nd, hen, 1st and 2nd, pullet, 1st, young pen.

In S. C. White Leghorns they entered two Cocks, two hens, one old pen, and won 2nd, old pen, 3rd, hen, 4th Cockerel. This is a splendid winning as this is one of the largest shows in the South.

devote their lives to physics or chemistry, even as those who would create new and higher ideals for mankind in literature, even so with those who love peace, there is no limit set. Whatever has been accomplished in the past is petty compared to the glory and promise of the future."

JUDGE STAPP To Be Sent To Austria, Violators.

The Tribunal law, compelling parents to send their children to school every day, unless excused by the Attendance Officer, was vividly brought before the violators in Judge Stapp's court last Saturday, when seventeen fathers were before the court, charged with failure to send their children to school without the necessary permission. The court room was crowded, spectators having previously been warned for the children and some fathers were present to testify as witnesses.

The court was lenient, however, although all seventeen of the parents got a fine, but it was the minimum, \$1.00 and costs, making a total of \$14.00 that each will have to pay. The Judge Stapp adhered strictly to the letter of the law, which is that children should be in school every day, unless excused by the Attendance Officer. Many would have had to pay several hundred dollars, as the fine as fixed by law, is \$5.00 a day for each offense, for each child. Some of these parents had as many as six children, but had been in school for several months. Most of the defendants pleaded ignorance of the law, but promised the court to send their children to school in the future, although from the evidence it will be a hardship on some of them, as they have large tobacco crops, which some claimed that they were not able to do their school sufficiently to send them to school. Most of the offenders were white.

Exchange

The exchange rate of the Pound sterling last Saturday was set at about \$29.00. It was lower than the average of one of the Monetary Societies of the Christian Church.

Barber Shop Notice.

Notice is hereby given that all Barber Shops in Lancaster will remain open Friday night, Dec. 24th, until ten o'clock and close at noon on Christmas day.

How's This?

Mr. Thomas Cotton, who recently bought the James N. Henny place brought a turkey to Paint Lick last Friday, that weighed 40 pounds and sold it to Mr. Coldiron for 40 cents a pound, thus realizing \$16.00 for the fowl. About the price of a yearling calf.

Christmas Advertising

We are carrying some large and interesting advertisements in this issue of the Record. Great bargains are being offered and our patrons will be well paid if they will read them all. Sixteen pages this week, be sure that you get both sections.

Team Runs Away.

Roscoe Hamilton, 16 year old son of Mr. and Mrs. Joe Hamilton of Buena Vista, was severely injured last Tuesday, when he was violently thrown from a wagon, the team running away. While his injuries are very painful it is not thought they are serious.

Antiques To Be Sold

We are carrying the announcement in this issue of the public sale of heirlooms and antique furniture at Crab Orchard Springs Hotel next Saturday afternoon, December 18th. Read the advertisement on the fifth page of the second section and you will see heirlooms and antiques by the score. Some rare and valuable pieces will be put on sale and as they say, it will be a positive sale. Attend the sale if you are an "antiquer" and pick up some of these rare bargains.

Will Probated

The will of the late Dr. A. S. Price was probated in the Lincoln County Court last Monday. The will was dated, Oct. 23rd, 1913 and bequeathed all his property both real and personal, to his wife, making her sole executrix without bond. It was witnessed by H. J. McRoberts and W. H. Higgins and was in Dr. Price's own handwriting.

J. Y. Robinson Will

The probate of the will of the late Jake Y. Robinson, was set for hearing Wednesday, January 12th, before Judge Rice. Indications point to a contest over this will, which was said to have been written in March 1919. Mr. J. Fleece Robinson, of Stanford, being the contestant.

KENTUCKY WOOL To Be Sent To Austria, Cloth Made, And Shipped Back.

Because there is no market in this country for the wool of 800,000 pounds of raw wool which it holds, the Kentucky Farm Bureau Federation is formulating plans to ship the material to Austria to be made into cloth, to be made, and shipped back.

Mr. Morgan pointed out that the lack of a market here has worked a serious loss to Kentucky wool growers, and the mills of Austria are closing down for lack of raw material and that the wool probably would be well cared for there.

The cloth, according to the secretary, would be sent back to this country to be placed on sale. He said that tariff and transportation costs would be nullified by the cheap labor of Austria.

Wool is stored in a warehouse at

SECRETARY HOUSTON Announces Peace Time Policy.

Secretary Houston takes occasion to announce the policy of the Treasury Savings Stamp and Certificate. The \$1.00 Stamp will be non-interest bearing, will be bright red in color, imprinted on a green tint, and will bear the portrait of Alexander Hamilton, the first Secretary of the Treasury. The \$5.00 certificate will be similar in design and terms to the \$1.00 and \$10.00 Treasury Savings Certificates, which will also be offered in 1921 to mature January 1, 1926. The new securities will supply a \$1.00 unit for saving and a Registered Government Security in the \$25.00 denomination, which can be conveniently purchased through the accumulation of the \$1.00 Treasury Savings Stamps. More important still, the new securities will complete a most attractive line of Government Savings Securities, the \$1.00 stamp and the \$25.00, \$100, and \$1,000 Registered Savings Certificates, and thus place the Treasury Savings Movement on a solid peace-time basis. The small denomination war-time securities, the \$5.00 War Savings Stamps, in a 1921 series, and the 25 cent Thrift Stamp, will also be offered during the coming year.

Two Horses Stolen Or Strayed.

Sam Hazley, a worthy colored citizen, who lives out on Boone's Creek had two good horses stolen or stray or strayed from his place on the night of November 2nd. He has inquired diligently for them, advertising in Danville and Harrodsburg papers, but up to this time not a single trace of them has been found. Sam will give a liberal reward for their whereabouts or information that will lead to their recovery. By calling Mr. William Lear, phone 245-H a minute description of the horses can be given.

Dr. Amon Resigns.

Dr. J. A. Amon who has served as county road supervisor, has resigned same to take effect immediately upon the appointment of his successor. Indications are that Mr. E. D. McMurry of Buena Vista, will be appointed in the next few days.

Card Of Thanks

We thank our many friends and relatives for their kindnesses shown us during the illness and death of our devoted husband and father, Mr. A. S. Price.

Mrs. A. S. Price and daughter.

Card Of Thanks

We wish to express through the columns of this paper, our sincere gratitude and everlasting thanks for the kindness shown us during our recent bereavement. The kind words of sympathy, the beautiful floral designs, were truly appreciated and for which we are deeply grateful.

Charles Rankin and family.

WAREHOUSE To Receive Tobacco Next Monday

Months of work will be done in the warehouse at Lancaster, Ky., with the tobacco crop, which is expected in this year of the Record, the opening of these warehouses to receive tobacco, Monday, December 20th.

The first sale of the season will be held on January 4th and it is thought that half of the land houses will be sold on this day. The last few weeks have been favorable weather for shipping and the farmers have taken advantage of the opportunity and as a result, by Christmas, probably two-thirds of the Garrard county crop will be ready for the market.

The Lancaster market promises to be the very best one in the state and should be patronized by every grower and farmer in the county.

Methodist Church Notes

On Sunday school will have a Christmas tree at the church on the night of Dec. 24th.

The public school especially those that do not attend Sunday school at any other church are cordially invited to attend our entertainment and place presents on the tree. All presents must be at the church by 4 P. M. on the 24th.

On next Sunday, Dec. 18th at Miss Mammie Brown's millinery store, beginning at 10:30 the Epworth League will have an Exchange consisting of cakes, nuts, eggs, butter, dressed chickens, home made candy and fancy work. Let all the members of the church send in a donation and help the league in raising our subscription toward the parsonage repairs. Sunday school and preaching next Sunday as usual. We are expecting you to be present and do not disappoint us.

Rural-Carrier Examination.

The United States Civil Service Commission has announced examination for the County of Garrard, Ky. to be held at Lancaster on January 24th, 1921 to fill the position of rural carrier at Lancaster and vacancies that may later occur on rural routes from other post offices in the above-mentioned county. The salary of a rural carrier on a standard daily route of 24 miles is \$1,800 per annum, with an additional \$30 per mile annually for each mile or major fraction thereof in excess of 24 miles. The examination will be upon only to citizens who are actually domiciled in the territory of a post office in the county and who meet the other requirements set forth in Form No. 1977 both men and women. If qualified, may enter this examination, but appointing officers have the legal right to specify the sex desired in requesting certificates of eligibles. Women will not be considered for rural carrier appointment unless they are the widows of U. S. soldiers, sailors, or marines, or the wives of U. S. soldiers, sailors, or marines who are physically disqualified for examination by reason of injuries received in the line of military duty. Form No. 1977 and application blanks may be obtained from the officers mentioned above or from the United States Civil Service Commission at Washington, D. C. at the earliest practicable date.

Billy Sunday's Bible Questions.

In a large city which Billy Sunday recently preached, he organized four hundred Bible Study classes. He arranged a set of questions to be used at each meeting. These questions may be of interest to Bible readers and they are given as follows:

1. What are the principle events in to-day's lesson?
2. What spiritual or practical lessons do these events teach us?
3. What are the best verses in this lesson?
4. Who are the principle people mentioned? Tell what you can about them.
5. What ancient or Jewish customs are mentioned? Tell what you can about them.
6. What places are mentioned? Tell what you can about them.
7. What errors are there to avoid?
8. What commands are there to obey?
9. What promises are there to claim?
10. What prayers are there to echo?

BURLEY CROP Will Be Cut Down Next Year.

Growers Of Boyle, Clark, Bourbon
Scott And Woodford Counties

Generally Agree That Acreage
Will Be Reduced Regardless
Of The Prices This Year.

Lexington, Ky., Dec. 16.—Central Kentucky tobacco growers intend to reduce their acreage for 1921 considerably below their planting for 1920, was indicated by reports received Saturday from the counties of Boyle, Clark, Bourbon, Scott, and Woodford. The same sentiment was expressed by growers of Fayette county who were asked whether they would plant as much next year as they did this summer. Some replied that it "depended on the price paid for tobacco this year," but the general tenor of the replies was that the acreage would be considerably reduced regardless of prices this year, and that growers said they would get out of the business altogether if they could do so and hold their tenants.

Henry M. Bosworth, former State Auditor and Treasurer and large tobacco grower, who received a high price for his 1919 crop, said he would "cut in half or cut it out altogether" if the prices paid at the opening of the Lexington market Jan. 4 did not warrant the conclusion that the manufacturers would pay a good price for good tobacco. Mr. Bosworth planted forty acres this year and about the same in 1919. He reported that his acreage, which was about 1,500 pounds to the acre last year, would not exceed much more than half that figure for 1920 season. Mr. Bosworth said he expected good tobacco would bring a good price on the local leaf market.

Reports from Boyle county told of weight losses, as compared with last year running as high as forty per cent. Will Durham, who planted 25 acres of tobacco on Col. R. G. Evans' farm, cut hardly any of it because the damage done it by wild fire, rust and other damage. Mayor W. D. McIntyre, of Danville, one of the editors of the Danville Advocate and himself in touch with the farmers of the county, said that there was a considerable acreage in Boyle which was not cut. The county last year averaged around 1,600 pounds to the acre, and Mayor McIntyre said farmers thought they would be lucky if their crops averaged 1,000 pounds this year.

Boyle farmers intend to reduce their acreage next year. Among the growers who had planted what would be called a small acreage in this section of the State, including William McNally, E. R. McGraw, A. L. Kates and A. Peach, another tenant of Colonel Evans.

Clark and Bourbon
From Clark and Bourbon counties only general reports were received, but they were along the same line as the reports from the other counties, showing heavy losses in weight and determination on part of growers generally, both landlords and tenants, to reduce their acreage next year to a point at which it can be handled without the employment of expensive outside labor to care for the crop and prepare it for market.

Lively bidding and good prices on the local leaf market this year will insure enough burley tobacco acreage in 1921 to supply the needs of the manufacturers. On the other hand, should the market show a dragging tendency or should there be low prices prevailing it is practically certain that the 1921 crop will be considerably reduced, as much as 50 per cent in most of the counties, or cut out altogether if the organized growers take a stand in favor of that solution of the low price problem.

WANTED. I want about fifty shouts, weighing about 75 pounds. Call phone No. 65 or 162.
J. E. Robinson.

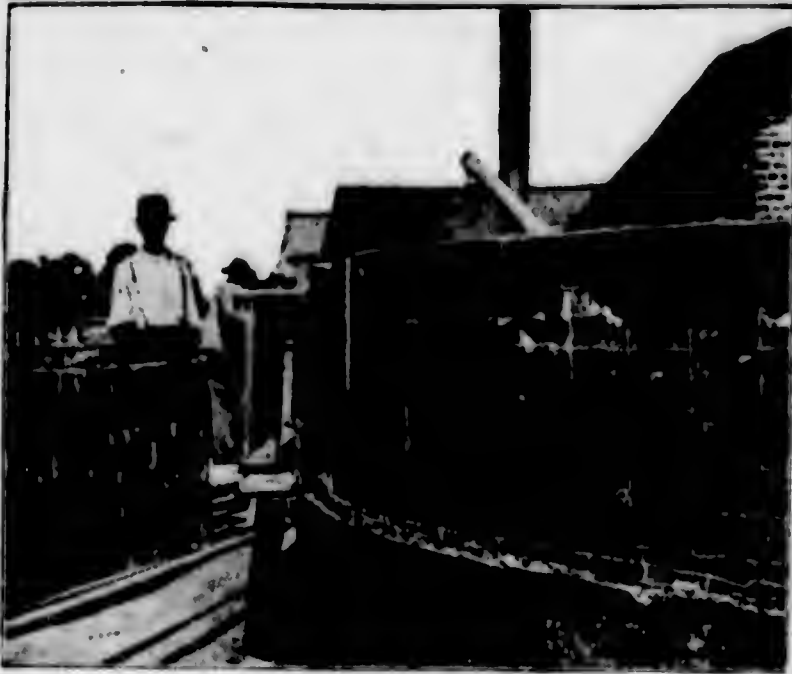

Pie Supper

There will be a pie supper at the High School every Saturday evening, Dec. 18th. Everybody invited and a good time assured. Proceeds go to school.

Satisfaction Prevails.

Contentment exists when WEST-PETRO is used. Oils that penetrate, get that vibrates, gives power untold. Get the best and see the "difference." Watch for the "RED TRUCK." Sold exclusively by W. S. Carrier, 9-2-11.

MOST IMPORTANT THAT GREATER USE BE MADE OF CHEAPER FEEDS

Ordinary Wire Fencing Used to Reinforce Concrete Construction of a Silo.

To assist farmers and stockmen in feeding beef cattle economically during the coming winter, specialists of the United States Department of Agriculture point out the need for a liberal use of roughage. The most situation in the United States requires a maximum of efficiency in feeding if production is to be maintained in the face of high costs for feed and labor. Recommendations of the department follow:

Economy should be the keynote in production. However, discretion must be used so that economy will be consistent with good gains. A ration might be so economical as to merely maintain the animal, but this would not be economy, when gain in weight was the object sought.

Greater Use of Cheaper Feeds.

At the present time, when grain and concentrates are so expensive, it is all the more important that a greater use be made of cheaper feeds. The cheaper feeds are those raised on the farm and consist primarily of roughages. Then, greater economy will depend upon a greater use of roughages, properly balanced with some grain or protein concentrate.

It should be borne in mind that a balanced ration is not necessarily the most economical. A ration having a nutritive value of 1.5 might produce the greatest daily gains on a two-year-old steer, yet, it might show better judgment and more profit to feed a ration with a ratio of 1.8, produced by utilization of a greater amount of cheaper roughages, and a lesser amount of high-priced concentrates.

The practice of feeding high-priced feeds, and not making a full use of roughages, is quite general throughout the corn belt. In some of the middle western states, very little straw is used for feed, but practically all for bedding. Quite often the cattle are allowed to run around the straw stack, resulting in a waste of at least 50 per cent of the straw. Straw, as dry roughage, forms a very prominent place in a ration for cattle, either in the fattening lot or when fed to stockers and feeders.

In some sections of Indiana and Ohio wheat straw makes up the entire dry roughage for the greater part of the feeding period. In certain parts of Nebraska, where alfalfa is produced abundantly, the straw is used only for bedding. Even where alfalfa hay is fed, cattle will eat more or less of good straw, if they have access to it. It is a good idea to keep some straw before them. Let the cattle pick it over and use what is left for bedding.

Waste No Straw.

Now is a good time to look at your straw stack. Trim up the stack by raking down the sides and properly toppling so as to shed the full rains. By spending a day on your straw stacks now you will save many a ton of straw which can be used in replacing considerable expensive hay next winter.

In some states most of the corn is cut, shocked, and husked out by hand later in the season. Why not let a shredder do the husking and have a roughage left, the greater part of which will be relished by the cattle? The shredded fodder, which is refused by the cattle, makes one of the very best bedding materials.

Corn fodder, while it is a good roughage, is not an economical one. There is a very large waste in handling. A large percentage of the leaves are lost, and the corn itself is about all the cattle get from the entire corn plant. Run your shredder through a shredder, feed the ear corn separately, and the greater part of the corn plant will be utilized. Corn fodder, however, can be used advantageously at the beginning of the feeding period in the fall or early winter. Range cattle that have never seen corn or grain of any kind can be put on feed more rapidly by starting on green or cured corn fodder. This kind of cattle will begin nibbling at the leaves and gradually get to eating the corn. On the other hand, if ear corn was placed before them it would be days before they would begin to eat it.

The use of legume hays, where grown on the farm, will obviate the use of high-priced protein concentrates. Good hay, however, is high priced and should be fed in such a way as to avoid any waste.

Corn stalks in the field, after the corn has been removed, should be utilized by turning a sufficient number of

cattle on them to clear them up completely before severe winter and snows come.

Protect Contents of Silo.

The most important roughage, so far as economical beef production is concerned, is yet to be mentioned, and that is silage. Silage is no longer a cheap feed, but in the strictest sense of the word there is no cheap feed. Silage is worth at the present time from \$10 to \$12 a ton, depending upon local labor conditions and upon the quality and yield of corn. Even at these prices it makes one of the most economical cattle feeds. More cattle can be handled on a given farm area where the silo furnishes the bulk of the roughage. More feed can be stored per cubic foot of space than by any other means. Cattle can be fattened on silage, supplemented with a small amount of a highly concentrated protein feed, such as cottonseed or linseed meal, and a little dry roughage, such as oat straw. Stockers and feeders can be wintered on silage alone.

LARGE VALUE OF OAT STRAW

Superior to Timothy Hay for Feeding Dairy Cows Because of Larger Amount of Protein.

According to average analyses, 100 pounds of oat hay will contain the following digestible nutrients: 45 pounds of protein, 38.1 pounds of carbohydrates, and 1.7 pounds of fat; or a total of 46.8 pounds of digestible nutrients. This hay will be superior to timothy for feeding dairy cows because it contains over one-third more protein. This will hold particularly true where protein feeds are high in price and difficult to secure. Ordinarily carbohydrate feeds, such as corn and barley, are relatively cheaper in price than protein feeds, such as gluten and oil meal, which are necessary to supplement rations of carbohydrate and timothy hay.

Clover and alfalfa hay are superior to oat hay, but mixed timothy and clover is practically the same in feeding value as oat hay.

To obtain the best quality of hay, the oats should be cut when in the flower or when the grain is in the early milk stage. If left until a later stage, the stems and leaves become somewhat more indigestible and are less palatable. Also the protein content is somewhat less where the grain is allowed to practically reach maturity.

SUCCESS WITH SUDAN GRASS

Crop Can Be Grown in Nearly All Sections of Country—It Is Important as Catch Crop.

Sudan grass is being successfully grown in nearly all parts of the United States. It does not serve well either as a "money crop" or a soil improver, hence it may never find a permanent place in regular crop rotations. It has, nevertheless, a very important place in the farmer's second line of defense as a catch crop which can be planted to give satisfactory returns when conditions have brought failure to other hay crops.

Sudan grass is replacing millet as the premier catch crop in many localities because of its ability to produce a fair yield and a high quality of hay under conditions of low rainfall, its rather short growing season, and its ability to thrive on a wide range of soil types. Large yields of Sudan grass are obtained only on good soils but the grass falls completely out of cold, poorly drained land.

BIG CROP OF POTATOES

1. To grow big crop of potatoes—
1. Have well-drained, fertile soil.
2. Prepare a deep seedbed.
3. Plant seed free from disease.
4. Plant seed improved by selection.
5. Keep seed from sprouting until planted.
6. Treat all seed for disease.
7. Cultivate thoroughly.
8. Spray for bugs and blight.
9. Rotate crops with legumes.
- Don't plant potatoes after potatoes.

GROWING TIMBER WILL PAY WELL

Farmers Owning Small Tracts Will Find It Advantageous to Market Crops Together.

CASE IN NORTHWEST CITED

When Care Is Exercised in Selecting and Cutting a Woodlot May Be Made Source of Income for an Indefinite Period.

With the help of the Forest Service and the county agent, a number of farmers who live in Hartsman Valley, Wash., just north of the Palouse National Forest, are co-operating this year in the sale of about 200,000 feet of timber.

Last fall the Forest Service was requested to aid these farmers in disposing of a considerable amount of timber on their tracts. It developed that there were approximately 200 settlers who owned about 200,000 feet of timber which they desired to dispose of as a unit in order to attract some one capable of handling the entire proposition. They were however unable to agree upon a satisfactory price. The problem had been worked up by the local county agent, a former Forest Service man, from whom the request for help came.

Not Needed for Crops.

The Forest Service agreed to make an appraisal of the timber and to assist in drawing up a contract and sale conditions. The appraisal was made last spring and a price fixed at about \$1.50 per thousand feet. Although the land is well adapted to agriculture, it will not be possible for it to be put all of it into cultivation for a number of years. Consequently it is to their advantage to devote it to growing timber, with such time as it is needed for raising crops. The stand consists of yellow pine of a good quality and contains a large number of trees just below merchantable size which will make rapid growth when the old timber is removed. It is distinctly a case where it will pay the farmers to grow trees. These facts were explained to the members of the association and they quickly saw the advantage of handling the forest in the manner recommended.

Farm Woodland After Thinning.

ed. In order to save the young growth they agreed to sacrifice 20 cents per thousand on the stumpage price.

Cooperation Is Favored.

Farmers in general who own small bodies of timber will find it profitable to cooperate with their neighbors in marketing their grown timber. In many cases the individual amounts are too small, as in the above instance, to make it profitable for their owners to advertise for bids or for sawmills to come in. When care is taken in selecting and cutting timber a woodlot may be made a source of income to its owner for an indefinite period of years.

PREVENT SPREAD OF DISEASE

Of Greatest Importance That Carcasses of Dead Animals Be Buried or Burned.

When it is considered that the spores of anthrax may be distributed to live stock through the feces of cats, dogs, hogs, chickens and flies it is more readily apparent that carcasses of animals dead of disease should be buried as speedily as possible. Most of these disease carriers come in close contact with the larger domestic animals and thus the direct transmission of germs from their body surfaces is possible and also it is known that they are more than likely to contaminate water courses. It is possible that many cases of anthrax may be attributed to the common house fly.

QUITE EXPENSIVE OATS

The actual cost of producing a bushel of oats in Missouri this year was 55 cents, which does not include 7 cents a bushel for hauling to the elevator. The cost was figured at \$0.60, cost of planting at \$0.04 and the cost of harvesting at \$7.71 per acre, or a total cost of \$20.00, which is 27 1/2 bushels.

We beg to announce the opening of our new Warehouse for receiving Tobacco

Monday, December 20th Opening Sale, JAN. 4th, Sell Your Tobacco at Planters and Growers Tobacco Warehouse

STANFORD STREET.

LANCASTER, KENTUCKY.

The House with Exclusive Northern Lights. Same Efficient and Courteous Treatment to small and large growers. Our Slogan—"Sell Your Tobacco on Lancaster Market."

JOE P. KELLEY, Floor Mgr.

JAKE GRAW, Starter.

W. A. SPEITH, Manager.

WOLF TRAIL

Mrs. Wilbert Dailey Pancaillert Miss Inez Land spent one night recently with Miss Jessie Ray.

Mr. Frank Land and family spent the day Sunday with relatives.

Mr. and Mrs. Elijah McMillian were shoppers in Lexington Monday.

Miss Anna Laura Atkins spent the weekend with Miss Bert Bailey.

Mr. and Mrs. Tracie Warner visited Mr. and Mrs. Carl Cotton recently.

Mrs. Abe Hurton spent the last week-end with her mother, Mrs. Layton.

Miss Thelma Wheeler is the pleasant guest of Miss Bert Bailey this week.

Mr. Phil House of Madison spent Friday night with Mr. and Mrs. Abe Hurton.

Mr. John Bailey sold a meat hog to Mr. Square Underwood for \$15 a hundred.

Mr. and Mrs. Clarence McCully were Sunday guests of Mr. and Mrs. Josiah McCully.

Miss Jessie H. Ray and Mr. Elmer Ray spent a delightful week-end with relatives in Madison.

Mr. and Mrs. Carl Mohrley and daughter, visited relatives in Madison Saturday night and Sunday.

Mr. and Mrs. Hugh Mohrley and little daughter, were week-end guests of Mr. and Mrs. Harve Teater.

Mr. and Mrs. Otis Stotts and little daughter, Mr. and Mrs. Andrew Stotts, Mr. and Mrs. Homer Carmon were entertained at the home of Mr. and Mrs. Mose Ray Sunday.

Mr. and Mrs. Wilbert Dailey entertained Sunday Mr. and Mrs. James Land, Mr. Coy Price and children, Mr. and Mrs. John Dailey and children Mrs. Elijah McMillian and son.

HARMONY.

School will close here Friday the 17th, until spring.

Miss Nellie Davis called on a friend at Turkey Town Sunday.

Mr. Corbett Cawell of Harlan called on his best girl Sunday.

Mr. and Mrs. Hamp McQuerry will move to Level Green first of the year.

The infant son of Mr. and Mrs. J. H. Brewer is very ill at this writing.

Mr. and Mrs. McQuerry were Sunday guests of Mr. and Mrs. N. M. Lawson.

Mr. Preston Hoskins of Paint Lick visited his parents, Mr. and Mrs. W. C. Hoskins.

G. N. Vanhook of Broadhead was the guest of Mr. J. H. Brewer Saturday night.

Mr. Luther Collette and Arthur McQuerry were guests of Mr. Pete Elam Sunday.

Mr. Walter Roberts was in Crab Orchard Saturday night looking for Santa Clause.

Mr. Pete Elam and family have moved in the house just vacated by Mr. Samuel J. Ballard.

Mrs. Gip Enson and interesting babies were the guests of her mother, Mrs. Pete Elam Sunday.

The news of the sudden death of Mrs. Charlie Rankin came as a great shock to all who knew her.

Miss Ocie Hoskins and sister, Okie spent Saturday night with their grand parents, Mr. and Mrs. James Hoskins at Beech Grove.

Farmers all around here are still busy stripping tobacco, and gathering corn, they have been blessed with fine weather so far.

Marion, the four year old son of William Perkins, colored, died Sunday morning of a complication of troubles, however the rest of the family who have been suffering from influenza are improving slowly.

Mrs. Johnson who has been quite ill for some time is slowly improving but the little one, who came to brighten the home for only a few short hours has passed into the great beyond into the God who gave it.

A number of young folks spent a delightful evening with Miss Lucy Vanhook recently, who entertained them with a candy party and all report a good time. Among those present were Miss Pearl Colson, Messrs Sherman Roberts, Jim Collette, Clel Vanhook and Thomas Colson.

An Egyptian Orchestra.

A full Egyptian orchestra was composed of twenty harps, eight lutes, five or six lyres, six or seven double pipes, five or six flutes, one or two pipes (rarely used), two or three tambourines (seldom used). If vocalists were added, which was not necessarily the rule, they would number about three-fourths as many as the harpers.

New Farm Implement.
Knives have been invented to be attached to cultivators and cut off weeds.

And No "Spare."
"Is the house a total fireloss?" queried the insurance agent. No, we should say, but the pretty flat.

Sea Water Disinfectant.
An Englishman has invented apparatus to electrolyze sea water on ship-board to form a disinfectant.

An Electric Washer, Maybe.
As a rule when your wife has something she wants to talk to you about she doesn't have.—*Madison Enquirer.*

Meteorology.
"Meteorology" is the delineation of character and reading of the past and future by means of notes upon the human face and body. It is an even more ancient occult science than that of palmistry.

Revolutionary Rule.
According to the medical column of a weekly paper, a person suffering from exhaustion should be put to bed and allowed to sleep as long as possible. This evidently does away with the old idea of waking the sufferer every twenty minutes in order to ask him if he is still dead.

Drum's Place in Music.
The drum is a relic of ancient ages. Music in its crudest form is fundamentally rhythmic, later to develop into harmony. The drum, lacking pitch, lacking true musical expression, nevertheless essentially registers rhythm. It represents music in its infancy as devised by primitive peoples.

"Spare" in Readiness.
A little girl was on a ferry boat with her mother. Evidently being the first time she was on a boat, she looked around and took everything in. Her mother questioned her as to how she liked the boat, upon which she replied: "I think it very nice, and I am glad they carry a 'spare,' pointing to a life buoy."

"Between Devil and Deep Sea."

The phrase "Between the devil and the deep sea" has probably no reference to the ancient fighting between the Persians and the Britons, though undoubtedly it has long been in use in Scotland. Its origin would appear to be lost in obscurity, though possibly it may have some reference to the New Testament story of the swine of Gadara.

Meteorological Note.
A man's calm often causes a woman's storm.—*Boston Transcript.*

Lucky She Isn't Mad.
It was an unfeeling married man who declared that his wife is pensive when she is not expensive.—*Boston Transcript.*

Might Be Condemned.
It's a lucky thing for some architects of their own fortunes that there were no building inspectors around while the job was being done.

Bubble Blowing.
The children's bubble blowing sport can be greatly improved by adding half a teaspoonful of glycerin to each quart of water. This gives tenacity to the bubbles.

Didn't Happen, Anyway.
Author (looking up from writing)—"Who was it said: 'After me the deluge?'" Friend—"I thought if I know, I never pay attention to those weather prophets."—*Boston Transcript.*

Preserve Friendship.
If a man does not make new acquaintances as he advances through life he will soon find himself alone. A man should keep his friendship in constant repair.—*Idolism.*

Must Be Qualified.
According to a morning paper another nutcracker expedition is to be organized very shortly. We understand that only those who can stand a northern wind on all four sides need apply.—*Punch, London.*

Extraordinary.
An amazing report reaches us from Yorkshire. It appears that a centenarian has been discovered who is unable to read without glasses or even to walk to market once a week.—*Punch, London.*

Quick Printing.
To celebrate the advance of the printer's art, particularly its increase in speed, a Caxton memorial Bible was wholly printed and bound in 12 hours in 1877. Only 100 copies were struck off.

Custom of Wearing Shoes.
The sandal, the earliest and simplest shoe, was known by the most primitive races and was certainly worn by the ancient Egyptians. The Hittites wore shoes, often with garters above to protect the ankle and calf of the leg.

Blaze of Peonies.
The Canadian prairies are a blaze of colors at midsummer from the peonies which grow luxuriantly in many sections of the country. In some sections they are cultivated in great quantities and shipped to the United States.

House Fly's Wonderful Eye.
"The eye of a common house fly has 4,000 facets, and it may be that each facet registers a complete image. If this is true," says Miss Booth, the eminent photomicrographer, "the fly sees everything reproduced 4,000 times—a rather dizzying experience."

Education.
Education is the leading of human souls to what is best and thinking what is best out of them, and these two objects are always attainable together and by the same means. The training which makes men happiest in themselves also makes them most serviceable to others.—*Ruskin.*

Union of South Africa.
The total area of the Union of South Africa is 467,701 square miles, or about one-sixth the size of the United States. The country is divided into four provinces, of which the Cape of Good Hope is the largest, with an area of 276,775 square miles; Natal covers 34,980 square miles; Transvaal 108,000 square miles, and the Orange Free State 48,926 square miles.

"Tough as Hickory."
"Tough as hickory" is a phrase suggesting the peculiar strength and elasticity of the hickory wood and it may be for this reason your favorite, Gen. Andrew Jackson, was endearingly called "Old Hickory" by his soldiers because of his tough, unyielding disposition. This nickname may have been bestowed during the war with the Creek Indians in 1813, when he fed his men on hickory nuts over a period when they were short of rice.

Spread of Bathing in Europe.
Bathing came to Europe as one of the good results of the Crusades. The Knights of the Cross found baths in general use among the Saracens, and seeing what good things they were, on returning from those wars took the initiative for their introduction. In this they were highly successful first in England and from that to other countries. So popular did the bath become that it became customary to have one before ceremonies such as marriage or knighthood, and the people have been ever since learning the value of keeping their skins clean.

Stop That "Creaking."
A "frog in the throat" soon quits "creaking" when the patient partakes of the painless and soothing home remedy of equal portions of honey and lemon juice. It has been found invaluable in relieving acute hoarseness and irritation of the throat and larynx.

Tobacco Pipe Worth \$500,000.
What is said to be the most expensive and valuable pipe in the world is owned by the sultan of Persia. It is the official pipe of that country and is smoked only on special state occasions. It is so bedecked with rubies and diamonds its value is said to be over \$500,000.—*Ohio State Journal.*

The Vatican.
The Vatican, the palace of the pope in Rome and one of the largest in the world, contains a valuable collection of works of art, and is one of the chief attractions of the city. It is a storehouse of literary treasures and documents of interest bearing on the history of the Middle Ages.

Poverty and Splendor.
I saw many poor, whom I supposed to live in affluence. Poverty has, in large cities, very different appearances; it is often concealed in splendor, and often in extravagance. It is the care of a great part of mankind to conceal their indigence from the rest; they support themselves by temporary expedients and every day is lost in contriving for the morrow.—*Dr. Samuel Johnson.*

Odd Names for Fish.
The bass of the South is the red fish; then we have the striped bass which has several vernacular names, says the American Forestry Magazine. All of our sunfishes, of which the common pumpkin-seed or tobacco-bass is an example, have been designated as various kinds of basses; and there is the brassy bass, the calico bass, often confused with the crappie; the silver bass is another name for the "moon-eye."

Inventor of the Lifeboat.
The first lifeboat was invented in 1784 by Lionel Lukin, a native of Dumfries, England. His "unimergible boat," however, attracted little attention, and a later design developed from his model won for H. Gresham the title of "father of the lifeboat." The American father of the lifeboat was Joseph Francis. He was voted a gold medal by congress for his invention. This medal, valued at \$1000 and said to be the largest ever given by the government to an individual, was presented to Francis at the White House by President Benjamin Harrison.

FRUIT JUICES HANDY FOR WINTER JELLIES

Pressure of Work During Hot Season Is Relieved.

Berries Being Excellent for Jelly and Marmalade. Drinks Juices Are Recommended for Use in Gelatin, Ice Creams, Etc.

The juice of such fruits as the grape, currant, blackberry, strawberry, raspberry, cherry, and orange makes delicious, wholesome drinks. Fruit juices also may be canned and made into jelly when it is wanted during the winter. Wholesome jelly makes a delicious and healthy food during the hot and busy fruit season. Sugar need not be added until the jelly is served or until the jelly is made.

The following directions are given by the United States Department of Agriculture. Extract the juice by boiling the fruit with a very little water and strain through a jelly bag. To prepare the jelly for canning pour it into bottles or jars which have been boiled for 15 minutes. Put these on a false bottom in a hot water bath. This must be a commercial canner or a canner large enough to hold sufficient water. The water should reach the neck of the bottle and the shoulders of the jars. A cotton stopper may be pressed into the neck of the bottle and left during the processing period, or a cork after being boiled, may be put in tightly.

If jars are used as containers put boiled tops in place and half seal. Process for 10 minutes at the summering point. Remove put stoppers of bottles in tightly, and when cool dip the top of the bottle into melted paraffin or sealing wax. Equal parts of risen and risen make a good wax. Paste the necks of the jars of the jars as soon as they are removed from the bath. The wax and store in a dry place.

As the jars are used in making jelly and as a base for marmalade, drinks made from these are excellent for use in making marmalade, jams, sherbets, and other dishes. Those which are so-called "fruit" will have a better flavor if they are added before they are bottled.

The Pear Tree

By HELEN EVERS

The tall good-looking man at the desk brushed his hair back from his forehead, looked up and smiled at the patient.

"Well, Dan," he asked, "what is it this time?"

"Big pardon sir," Dan said apologetically, "I know you asked not to be interrupted, but I thought, but this young lady."

"Young lady?" the man at the desk exclaimed, his face expressing surprise. "I asked to be guarded from young ladies, especially."

"I know Mr. Hammond," Dan said, "and I have guarded you well, but it's your time, I think. Mr. Hammond, that has got here before you, and you know it, and all."

"Dan," cried the master of the house, "wait, you stop talking and leave me, I was at a most interesting point in my work."

"But this lady," Dan went on, "she is different from the rest of 'em, she says she's got to see you if only for a minute, and she's the one who moved into the little house next door."

Clark Hammond laughed with one of his sudden changes of humor. "The spider person," he said, "I remember now that I once told you a spider had taken the house. Show her in, Dan, and let's get it over quickly."

The old servant then opened the door and the spider person entered. She was a tall, thin, dark woman, dressed in a sort of soft little dress and sat down in a big chair. Professor Clark Hammond stared at her for a moment, blinking, by the interior of his eyes, from what she expected. She held a large basket upon her knees as she waited, almost breathless. The spider person from next door, and more the appearance of a small bird, who had been caught, looking over the fence, which was nearer the house than the professor's house. She was in fact, little Nan Norris, widow of the city.

"Won't you," the professor asked pleasantly, "allow me to remove you of that great basket?"

The young woman looked more startled than ever, then as the professor looked her cheeks she spoke quickly.

"You are going to be dreadfully angry with me, Professor Hammond," she said, "and I am not an apology. You see, I did not know that it was your tree and I stepped on it completely."

"I am afraid," the man said, "that I do not understand."

"It was," she answered steadily, "your prized pear tree that I stepped on the one with which you have been making experiments. I thought it was on our line, we have recently rented the house next door, and I went out one evening with some of the school boys to help me, and we picked all your pears."

A light of pleasant remembrance came to the blue eyes. "It was a glorious moonlight night," the girl added, "and the pears were small and sweet as sugar."

"When did Mrs. Ryan tell me that day—Mrs. Ryan is the woman who is going to live with me here, that the pear tree was on your property, I—I had given away most of the pears sent them to the city I came from, to people there who do not often have pears or who things to eat, and the rest I canned."

Clark Hammond leaned back in his chair, watching the various emotions that crossed the girl's sweet face. His own first emotion of anger and disappointment gave way suddenly to sympathetic amusement.

"And now," he asked whimsically, "what are you going to do about it?"

"I cannot offer to pay for all these pears yet," the young woman answered, "she removed the wrapping, while the professor looked forward, then he looked at the contents of the basket, labeled jars."

"These are the spider pears," the girl explained, "I hope that you will accept them."

She regarded her offering anxiously. "They are the very first that I ever did up in my life and they turned out splendidly." Her eyes were pleading. "Won't you?" she begged, "just as a sort of peace offering?"

There was something strangely disconcerting in that blue-eyed, respectful gaze; it was Clark Hammond's turn to flush, and he emerged from the procedure pleasantly surprised.

"I'll tell you that," he agreed heartily, "just from some pears over whenever I happen to feel that I'd like them. Dan, let me know."

The girl laughed. "I am proud of my own experiment," she said, then asked, "Is this all?"

"A small matter," he generously assured her.

And one late fall evening Nan, entering the professor's dining room with her dish of pears, found these places laid for two.

"I hope," Clark Hammond said with new diffidence, "that you will stay to spare me another lonely meal. I have always wondered," he went on, "as she slipped into the opposite chair, 'how it would seem to have you there, my wife and this home I have dreamed of. Nan, will you stay and make my dream come true?'"

The girl smiled as he came toward her, but after a while she raised a trembling laughing face.

"Home," agreed Nan, "I'll stay with you, and your tree."

HONK! HONK!

Here Are Ten Commandments That Autosts Should Heed.

Seven years ago, I came up to the commandments for the guidance of many in relations to others were put down. That was long before the advent of the automobile, however, and no provision was made for the conduct of auto drivers. Here are more modern, more comprehensive, for the autosts and it is a safe thing to every driver, because they are the result of accidents and injuries, and the loss of life and property.

First—Don't attempt to pass a man about if there is a vehicle coming in the opposite direction. Always see that the road is clear.

Second—Don't pass standing street cars, discharging or taking on passengers.

Third—Don't cut in short, after passing a vehicle.

Fourth—Don't turn into a street except at corners.

Fifth—Don't cut across. When making a turn, make allowance for traffic in other directions.

Sixth—Slow down and sound your horn when crossing or entering another street.

Seventh—Always give the proper signal when starting, stopping, turning or changing speed, at any other traffic.

Eighth—Don't forget the horn. Speed is safe speed.

Ninth—Always look ahead. When you observe children playing near the curb or in the street, they may not have the wisdom of adults.

Tenth—Don't drive your car at a without knowing that brakes, and steering gear are all right and the lights and license plates are up to the law.

First Secretary Is Honored.

The coat of Alexander Hamilton will adorn the new \$100 Savings Stamp, which will be bright red, printed green tint. It is interesting to note that this will be the first time that the first Secretary of the United States Treasury has been honored by having his portrait on a government revenue stamp. The new \$25 Savings Certificate will be similar in design and color to that of the \$100 and \$1000 denominations, although different in color.

Officials of the Treasury Department at Washington say that since the financial conditions have been bettered and countless thousands of people have become systematically saved through the work of the Savings Division of promoting thrift and saving during the past three years; at keeping vast savings securities in the hands of investors and increasing the people with the desirability of holding Liberty Bonds and having more at the low prices in the market.

It is interesting to note that the 1921 issue of the \$5.00 Savings Stamp will be of longer size than the year's and will be orange in color, with the portrait head of Abraham Lincoln. The larger size is expected to be approved by the public and should make the "baby bonds" much attractive artistically.

"Share" in Headlines

A little girl from a fairy boat with her mother. Recently being the first time the girl was a boat, she looked around and saw everything in her mother's eyes. For as to how she felt, she said, "I don't know, but I am sure I am a 'share' in the headlines."

What Of To-Morrow?

Just how great is the patriotism of this country, and how strong a pressure can it successfully withstand?

With the gates to our shores wide open, and fifteen millions of Europeans clamoring for admission, we may have that patriotism put to a test sooner than most people believe possible.

Our social fabric is undermined with trouble makers new—people whose greatest aim in life is the destruction of government.

When this avalanche of the foreigners descends upon us who will be the first to reach them?

Not the disciple of law and order. He will pursue his beaten path in the accumulation of riches, as has always been his custom.

But the foreigner will not be neglected.

The Persistent Society of Troublemakers will be after him en masse. He will be hounded, and coddled, and filled with the imaginary evils of our system of government, and made to believe that by its destruction wealth will flow into his hands.

It is not the honest laboring man we have to fear in this matter. He is a good American, believes in his country and is willing to fight for it if occasion requires.

Not there is a class of professional agitators, who tatter upon the credulity of others, who will be the brains and the ring-leaders in this campaign of vilification and destructiveness.

Fifteen millions of foreigners!

How many of them, a year from the day they land, will be ready to smite the hand that feeds them?

When We All Fly.

One of the greatest wonders of all ages is the development of aerial navigation.

A few days ago a mail plane, carrying its pilot and four hundred pounds of fast mail, traveled the distance from Chicago to New York in five hours and thirty-one minutes. By air line the two cities are 742 miles apart.

From Cleveland to New York the average rate of speed was 151 miles an hour.

It appears now that there is but one great obstacle to the universal use of the airplane for passenger and traffic purposes. That is the certainty of instant death in case it becomes disabled and falls to earth.

But doubtless some day science will overcome this obstacle. A means will eventually be found whereby the airplane will no longer be heavier than air, thus rendering it possible to hold it suspended between earth and sky.

When that day comes every citizen of any means will want his plane.

You may even see the successor to the editor of this paper step into his air car, press a button, dart over into the other end of the county, gather in the news, and be back in the office again within an hour's time.

There is no limit to the possibilities of the airplane.

And there is little doubt as to the earthly actuality of these possibilities.

What's The Trouble?

Farmers in many sections of the country are facing a serious condition of affairs.

Farm products have slumped heavily of late, and yet the laborer employs and the things he is compelled to buy remain at practically the same high figures.

He is compelled to market his produce because he must have funds with which to meet his obligations.

The farmer's feeling the pinch, especially in view of the fact that the consumer is not getting the benefit of his sacrifice.

The fact that city dwellers are still complaining bitterly over the continued maintenance of pre-war prices leads one to the belief that the pockets of speculators and middlemen, if not others, are being badly lined with excessive profits.

It has been the custom in the past to make the farmer the goat to this breed of get rich quick rascals. Is this practice to be continued to the end of the chapter?

GOOD LESSON FOR BEGINNER

Specialists Outline Plan for Determining When Dough Is Ready to Be Put in Pans.

Beginners often have difficulty in telling whether the dough is ready to be divided into loaves and put into pans. A good rule is to measure its volume. Say home economics specialists of the United States Department of Agriculture. When it is ready to be made into loaves, the dough for each loaf if made out of hard wheat flour, should amount to three pints; if made from soft flour, to about 2½ pints.

The loaves to which these measures of dough and reach in the mixing bowl can easily be determined before hand and marked. For illustration: If one loaf of bread is to be made, before mixing it put three pints of water into the mixing bowl and mark the point to which the water comes. This will indicate the height to which the dough should rise.

When recipes direct that dough be allowed to double or triple in volume, it is convenient to have a measuring glass to determine the expansion. An ordinary kitchen bowl will do but a glass of smaller diameter, like a small jelly glass, is better. Before the dough is set to rise pour of a small piece and float it in the glass. Note the height to which it comes and mark the place it will reach when its volume has doubled or tripled in the case may be. Put this inside the large leaves of bread and use it as an indicator.

CHEESE AND POTATO DISHES

Excellent Luncheon or Supper Dishes Tested in Kitchen of Department of Agriculture.

The following excellent luncheon or supper dish is one tested in the experimental kitchen of the United States Department of Agriculture:

1 pound of potatoes
1 pound of milk
1/2 cup of butter
1/2 cup of salt
1/2 cup of sugar

Boil the potatoes and milk together until thoroughly mixed. Add the egg and the salt and heat thoroughly. Finally add the cheese. Bake in a casserole for ten or fifteen minutes.

A similar dish may be made by cooking on the inside of a baked potato and mixing it with cheese, as above. Fill the potato skin shell with the mixture, return to the oven, and bake until light brown.

HOUSEHOLD NOTES

Add a little ammonia to cut the grease when washing dishes.

In mending an overdone of soft stuff, give body to the shoulder seams and the opening where the fasteners go by sewing them on tape.

A few drops of olive oil in the last rinsing water when the head is washed gives the hair a gloss without making it greasy.

Live Stock Facts

KEEP BROOD SOWS IN WINTER

Animals Must Be Properly Fed in Order to Farrow Large Number of Healthy Pigs.

During the winter the brood sows should be maintained as cheaply as possible, but at the same time they must be properly fed in order to farrow a large number of healthy, well-grown pigs in the spring. Best results are obtained when sufficient feed is given to produce daily gains on the sows of one-half or three-fourths of a pound. To do this the grain fed must be limited, and dressed with some roughage, for unless the ration has sufficient bulk, the sows will become constipated and hungry, due to the undisturbed condition of the digestive tract. Leguminous hay is the chief roughage available at this season, and their use will cheapen the cost of feeding.

Either alfalfa, clover, soybean or cowpea hay makes an excellent roughage, and when fed, little or no high-priced protein concentrate is needed to balance the corn. Bright leafy alfalfa hay gives the best results of any of these roughages. Alfalfa meal is simply the best grade of alfalfa hay chopped into a meal. Clover hay contains almost as much nourishment as alfalfa hay, and soybean hay, cut and cured when the beans are almost ripe, is a very nutritious feed. Cowpea hay should be cut when the first peas are ripening and consequently does not have as high food value as soybean hay. Great care must be exercised in cutting soybean and cowpea hay, for the stalks are very heavy and succulent and unless thoroughly dried are apt to mold. Under no condition should a brood sow be fed upon any roughage which is not bright, nutritious,

Sows Feeding Some Distance From Sleeping Quarters in Order to Secure Necessary Exercise.

and free from spout or mold. She does not relish or thrive on such inferior feed. It is very apt to cause severe digestive troubles, and may lead to the loss of her litter.

WINTER ATTENTION TO EWES

Success or Failure of Lamb Crop Next Spring Depends on Care Given Breeding Flock.

The success or failure of the lamb crop next spring will depend to a large extent upon the care given the breeding flock during the winter. In order to secure active, well-developed lambs, a large percentage of which are twins, it is absolutely necessary to have the ewes in a thrifty condition at mating time, and conditions of feeding and management during the winter months must be such that the flock will be maintained in good flesh, strong and vigorous.

WAY TO AVOID HOG CHOLERA

Prevent Exposure of Susceptible Animals to the Germ Which Causes the Disease.

To avoid hog cholera: First, avoid exposure of susceptible hogs to the germ which causes the disease; second, hogs when exposed to hog cholera should at least be injected with anti-hog cholera serum, which will protect them during the period of exposure; third, produce permanent immunity in the hogs by administering virus at the same time protective serum is injected.

HIGHER PRICES FOR HORSES

Animals for Breeding and Farm Work Have Advanced Rapidly Within Past Six Months.

Prices on horses for farm work and breeding have advanced rapidly within the past six months and the fact that only about 10 per cent of the horses in the United States are in foal and not more than 10 per cent of the yearlings we should have no base, indicates that prices are due to go higher than we have ever known them to be.

GRADE IS IMPROVED ANIMAL

Strictly Speaking It Is One That Has One Purebred Parent, the Other Being Mixture.

Strictly speaking, the grade is an animal that has one purebred parent, the other being a mixture. The term grade is sometimes applied to an animal that is from improved ancestry, whether or not it has one purebred parent. However, not every animal that is not purebred is a grade. The animal with inferior mixed blood is in strictly a scrub.

The Pear Tree

By HELEN EVERS

The tall good-looking man at the desk brushed his hair back from his studious forehead and glanced up impatiently.

"Well, Dan," he asked, "what is it this time?"

"The parson sir," Dan said apologetically. "I know you asked not to be interrupted, Mr. Hammond, but this young lady—"

"Young lady?" the man at the desk exclaimed, his tone expressed exasperation. "I asked to be guarded from coming ladies, especially."

"I know Mr. Hammond," Dan hastened to say, "and I have guarded you well, but it's your fault, I reckon, Mr. Hammond, that has got her before you, and you bet a back, and all."

"Dan," cried the master of the house directly, "will you stop talking and leave me; I was at a most interesting point in my work."

"But this lady," Dan went on unmoved. "Is different from the rest of 'em, she says she's got to see you if only for a minute, and she's the one who moved into the little house next door."

Clark Hammond laughed with one of his sudden changes of humor. "The splinter person," he said. "I recollect now that Louisa told me a spinster had taken the house. Show her in, Dan, and let's get it over quickly."

The old serving man grinned as he shuffled out of the room while the "splinter person" entered in a sort of soft little rush and sat down in a big study chair. Professor Clark Hammond stared for a moment unbelieveably, the intruder was so different from what she expected. She held a huge basket upon her knees as she waited almost trepidantly. The "splinter person" from next door had more the appearance of a small boy who had been caught robbing one's orchard, which was nearer the truth than the professor knew. She was, in fact, little Nan Norris, lately of the city.

"Won't you," the professor asked pleasantly, "allow me to relieve you of that great basket?"

The young woman looked more startled than ever; then as the rose-colored flush faded from her cheeks she spoke quickly.

"You are going to be dreadfully angry with me Professor Hammond," she said, "and I owe you an apology. You see, I did not know that it was your tree and I striped it completely."

"I am afraid," the man said puzzled, "that I do not understand."

"It was," she answered steadily, "your prized pear tree that I robbed the one with which you have been making experiments. I thought it was on our line, we have recently rented the house next door and I went out one evening with some of the school boys to help me, and we picked all your pears."

Clark Hammond leaned back in his chair watching the various emotions that crossed the girl's sweet face. His own first emotion of chagrin and disappointment gave way suddenly to sympathetic amusement.

"And now," he asked whimsically, "what are you going to do about it?"

"I cannot offer to pay for all those pears yet," the young woman answered as she removed the wrappings with the professor leaned forward intently, hardly to suspect the contents of mouth labeled bars.

"These are the spaced pears," the girl explained. "I hope that you will accept them."

She regarded her offering ruefully. "They are the very first that I ever put up in my life, and they turned out splendidly." Her eyes were pleading.

"Won't you?" she begged. "Just as a sort of peace offering?"

There was something strangely disconcerting in that blue-eyed repentant gaze; it was Clark Hammond's turn to flush and he emerged from the procedure pleasantly puzzled.

"I'll tell you what," he agreed readily, "just bring some pears over whenever I happen to feel that I'd like them. Dan will let you know."

The girl laughed. "I am proud of my own experiment," she said, then asked hesitatingly, "But what of yours?"

"A small matter," he generously assured her.

And one late fall evening Nan, entering the professor's dining room with her dish of pears, found there placed for her.

"I hope," Clark Hammond said with good deliberation, "that you will spare me another lovely meal. I have always wondered," he went on as she slipped into the opposite chair, "how it would seem to have you there, my wife—and this the home I have dreamed of. Nan, will you stay and make my dream come true?"

The girl smiled as he came toward her, but after a while she raised a questioning looking face.

"Home," agreed Nan, "beneath our own vine—and pear tree."

Only 7 More Shopping Days Until Christmas

and we intend putting in every moment toward disposing of our immense stock as far as it is possible to do, so with this end in view we are now making

Drastic Price Reductions

—ON ALL—

Coats, Suits, Dresses, Furs, Skirts, Waists and Shoes

On all these lines we are going to take our losses NOW, instead of waiting until January.

Cost and original Prices FORGOTTEN in our effort to unload our immense stock of above named goods immediately.

Christmas Goods Going Fast

Our store is filled with hundreds of practical, sensible gift goods, at same reasonable prices, so bring in your list and see how easy it is to shop here.

Welsh & Wiseman

DANVILLE, KENTUCKY.

In some sections of the country they say booze is selling at a dollar a drink. But it's a safe bet they of the American dollar. But even Claus. The chimney won't be so hot don't set out the bottle so a fellow that has its advantages. It furnishes when he slides down in the hours of a good excuse for hanging onto them. Christmas morn.

Give the Family CALORIC HAPPINESS this Christmas

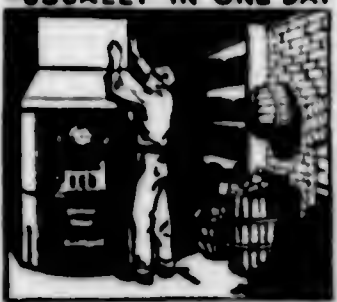

This Christmastime, while you are thinking of ways to increase Happiness—remember that COMFORT is a condition that has much to do with happiness.

Warmth is the basic comfort—and the Calorific Pipeless Furnace, circulating its genial, cheery warmth in every room, makes ideal the conditions of happiness in the home.

Get a Calorific for your home this Christmas—and perpetuate the happy spirit of the Christmas season all through this winter and the winters to come.

The Calorific heats homes of 18 rooms or less through one register. Safe, clean, convenient—operated easily as tending one stove. Costs less than stoves necessary to heat same space. No expensive installations. No plumbing—no pipes to freeze. Does not heat basement. Usually installed in one day. Made by largest manufacturers of warm-air furnaces in the world. Sold under Money-back Guarantee. Over 100,000 users—many in this neighborhood.

THE CALORIFIC IS EASILY INSTALLED—USUALLY IN ONE DAY

Let us explain the patented triple-casing which makes Calorific heating an unequalled success.

Haselden Brothers.

THE ORIGINAL PIPELESS FURNACE TRIPLE-CASING PATENT

Neglected Wife

By ALDEN CHAPMAN

A sad tangle of life Lionel Stoddard had made for himself, and recklessly submitted himself to the consequences in a desperate sort of way when he realized what a wreck he had made of his career and sought to cast the responsibility of a wife he did not love upon his mother and sisters.

There was no qualifying the stern, sober truth. He had wavered and wavered from the path of rectitude, ignored the duties of a young man with great opportunities to create a successful career, had cut away from home, had become an outcast and then, to justify himself, had placed all the blame on his stepfather, John March.

The latter had married the widowed mother of Lionel at forty. He was a man of wealth and position and had given Mrs. Stoddard her two daughters and Lionel a truly regal home. All that luxury could suggest was rendered them, and Mr. March, proud of the family he had adopted until there came to the surface some of the reckless things of his dissipated stepson. He had at once cut short his generous allowance and had quietly, but firmly demanded reformation, or he would banish Lionel from the family circle and disown him for all the future. What Lionel took for high-handed indignation on his own part was really the perverted selfishness of a mind filled with distorted ideas. Everywhere Lionel resented and abused his stepfather.

"He has such a grand idea of his social and business prestige that he treats me like some household," he complained bitterly. "Well, I'll pay him off yet. I'll take a pleasure in pulling his proud name down into the dust, and never hesitating the suffering and pleadings of his broken-hearted mother. Lionel went to a wild western district and abandoned himself to companionship with the roughest and wickedest in a rude mining camp.

Lionel met and married Nettie Truse. She was the daughter of the most notorious outlaw and cattle rustler in the district. He was shot down in one of his raids and out of a passing impulse of pity Lionel married the bereaved daughter. He regretted it later. She was a sweet, innocent girl of eighteen, and was all good where her father had been all bad, but he had engaged her up from all outside association and she was kept so ignorant that she could not even write her own name. Her great merit was her sincere devotion for the man who had wedded her. Lionel lived with her for a month, wearied of her, told her he had great prospects in another section of the country that would take three years to exploit, and sent her East, with a letter to his mother asking her to care for her until he could recoup himself financially.

He received a week later a letter from his mother telling him that his wife was made welcome. Then Lionel practically forgot all about her and the old home ties. He sought a new environment, reformed and within two years had made a fortune.

Lionel never thought of Nettie save as the uneducated girl she was. He had taken a sort of malicious satisfaction in burdening his stepfather with a guest who, while not at all unattractive, was scarcely his equal socially. He decided to go back home, wondering if his wife had been happy in her new environment.

In the meantime Mrs. March and her daughters had learned to love the friendless girl bride. They had a home, with the comfort and approbation of John March, seen to her education and had become a peerless being in education and refinement. Much as she loved Lionel she received him upon his return almost as a stranger. She had not become worldly wise but she determined that he should win her back through true affection or not at all.

"She is my wife," he told his mother. "Yet she seems to forget the fact."

"Naturally, after your long neglect," was the reply. "You love this new Nettie, my son, as I plainly see. Make yourself worthy of her."

Then real affection aroused all that was better and higher in Lionel Stoddard. It was the patient labor of weeks to convince Nettie that he really prized her now. Step by step they came back to the old companionship, only this time made lasting because of the new love instilled into his nature.

It was a happy day for the entire family when husband and wife appeared in harmony with the changed spirit of a new birth in an affection that it had taken the years to develop to its completeness.

And Lionel Stoddard was proud of the wife who, for his sake, had become an educated and refined woman, his spirit as also that of his mother and sisters.

Church Bells Put to Odd Use.

A curious use of church bells was to announce the arrival at Derby of the church bringing fish from London. Each bell was as the church passed would take up the news and pass it on. In many English parishes the shrilling bell used to be rung the morning of Shrove Tuesday to remind the faithful to confess before Lent. This has now changed its name to "Pancake bell." In Northamptonshire the bell was used on one side with leather and was known as the "Pancake bell."

Waiting Years

By VICTOR REDCLIFFE

(Copyright 1920 Western Newspaper Union)

"He has surely come to take Miss Duane away from us," whispered Alma Byers, as she and Virginia Tracy, her fellow stenographer in the office of Rind & Mowbray, stood guardedly looking past the half-open door of the inner office of which Miss Duane was in charge.

"Mr. Woodson is certainly very serious, if not agitated. Just watch him, Alma."

The object of their curiosity was certainly restless, if nothing more.

Everybody about the office liked Vincent Woodson and there was a reason for it since he was at peace with himself and all the world, and sought to brighten the destinies of all with whom he came in contact. Only a month previous Woodson had left the service of Rind & Mowbray, by whom he had been employed for over five years.

"The wonder of it," a friend had said, "Woodson is the kind of man who sticks to a position even if it is not the most lucrative in the world. I guess the oracle, though."

"What is that?" was inquired.

"Miss Duane. He has been asking her to marry him for the past two years and could never bring her to the point of acquiescence. The fact is, while not ambitious at thirty, Miss Duane looks at the practical side of life, and I am told has insisted that Woodson have a home for her and all paid for before she will consent to give up a comfortable earning for her own living."

"And that is why Woodson has changed his position, in the hope of securing a better salary?"

"That, too, for his mistress being in her consequent career."

At last was true, and now after a brief lapse of time, early one morning before the office had settled down to its duties for the day Woodson had appeared, groomed as if for a first night and looking exceedingly nervous. He was truly nervous for his fate would depend upon what Miss Duane might say upon this, the most suspicious occasion of his life. For he had come with a purpose. She must at once decide to become his wife or he would abandon the dream of the years, and sink into disappointment and despair.

Miss Duane had something very new and animated in the honest face of the man, she respected and esteemed as she entered the office. It took five minutes of time to start work. Woodson pointed to a chair and a trifle flattered Miss Duane sank into it.

"You have something to tell me?" she said.

"Yes," stammered Woodson nervously, "and I hope it will please you. I have fallen in love with a little estate, Marcella, I have a home to offer you at last. Will you accept it?"

His voice was anxious and unsteady. As to herself a slightly heightened color crossed Marcella's face and her breath came more quickly. Woodson had extended a photograph of a tree and high enclosed cottage homelike enough, but with a wealth of floral beauty surrounding it. A passing shade of disappointment was expressed in the eyes of Marcella, but as she regarded the earnest, long-haired man who had waited for her and loved her patiently, loyally through the years, she placed her hand in his own.

"Is it all your own?" she asked.

"Yes, mine, and something better than I hope."

"It is settled," cried Alma Byers gleefully.

"Yes, I guess there is no doubt that we shall soon have a wedding," said Virginia with rapt anticipation. It was two months later when the ceremony transpired, Alma and Virginia were invited. Miss Duane had given up her position. The girls were asked to accompany Woodson and Marcella to their new home.

It was fifteen miles from the city and the wedding party started out in automobiles. They knew they were nearing it as the pilot machine slowed up. It was before the cottage depicted in the photograph.

"It is charming," pronounced Marcella, and yet it was more dimly lit and modest than she would have preferred.

"Oh, this is only the gardener's lodge," said Woodson with affected lightness of tone, and he hastened on to come in view of a grand mansion in the center of the estate. "I wished to surprise you. This is our real home."

"You do not mean—"

"That the fortune I have inherited is a very substantial one," answered Woodson. "It is all your reward for waiting for me, for loving me, for greeting the humbler sphere that I at first presented."

It was a grand climax to an auspicious day. As to Virginia and Alma, they experienced one thrill of delight after another, as they accompanied the happy bridal pair about the ideal home that had become their own. Amid the beautiful winding paths of the lovely estate Marcella and Woodson wandered hand in hand after their guests had departed.

"Oh, Vincent! It is like some beautiful dream," murmured Marcella.

"It is our haven of joy after all the years," replied Woodson, gratefully and with tenderness.

Sensible Gifts for Men

FOR YEARS WE HAVE SERVED THE MOST DISCRIMINATING MEN OF THIS COMMUNITY, AND IN THIS WAY HAVE LEARNED THEIR WANTS AND DESIRES, AND HAVE PREPARED OURSELVES TO MEET THEIR DEMANDS.

Shirts

Of every description. Our holiday selection of Shirts can not be excelled. Silk, Fiber, Russian Cord, Madras and French Flannel, from

\$2.00 to \$10.00

Gloves

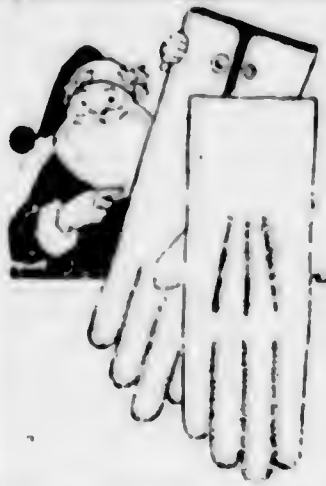

Mohair, plain and Silk lined. Caps in the different shades and styles, and the ever popular Buck Skin, from

\$3.50 to \$8.50

House Slippers.

A sensible gift and one that is always appreciated. We have them in Felt and Leather, Kid lined, from

\$2.50 to \$6.00

Hosiery

In Silk, Wool, Cashmere and Lisle, in fancy or solid colors. "Phoenix" and other makes from

50c to \$2.00

Bath Robes

Luxurious assortment in fancy patterns, wonderfully tailored with Silk Cord bindings, from

\$8.00 to \$20.00

Christmas Neckwear

The unusual condition of the Silk market presents a splendid opportunity for the Christmas buyer. An unusual assortment from

50c to \$3.00

THE ABOVE IS ONLY A FEW OF THE MANY GIFTS WITH WHICH OUR DEPARTMENTS ARE CROWDED.

Parks & Hendren

Make Your Selection Now

"Home Of Better Men's Wear"

Danville, Kentucky.

Or Less

It is only the merchant who can be convinced that they need more intelligent customers. —Cartoon Magazine.

Exemplary Service.

"Phone—'Hello, Central.' Get me Blank 5487—and say, get it quick, like they do in the movies." —Boston Transcript.

Paying for 'Em Now.

What has become of the old-fashioned man who thought a gown was something to sleep in? —Dallas News.

Small Savings Important.

Small savings are like stones in a bridge; they build a firm support to carry out over the flood of an emergency.

"Spiral Curve" on Railroad.

This is on the Canadian Pacific as the railroad climbs the Continental divide from the west. In a tunnel in a mountain the road describes an entire loop, the track at the higher elevation passing over that at the lower.

Never Surrender.

The particular things which we do, the particular efforts we make, often seem to fail; but it is the perpetual struggle, the everlasting trying, the constant pushing, that count, and that develop men and women of unquenchable spirit. —The New Success.

Venezuela.

Venezuela consists of 20 states and two territories, with a total area of 380,970 square miles, and has an estimated population of 2,850,000, of which approximately 100,000 live in Caracas, the capital and metropolis of the country.

Electric Light Plant—Perhaps.

A plant which is somewhat common in Brazil shows a remarkable luminosity which can be seen for a distance of a mile. Seated near one of these plants after nightfall it is possible to read fine print and to perform other operations which require a light.

Easy

A woman doesn't have to be musical to get a lot of nice out of a husband. —Philadelphia Bulletin.

The One Absorbing Topic.

Reason some people don't talk more than they do is that they can't think of anything to say about themselves. —Boston Transcript.

A Human Bouquet.

Rocky Mountain Telegram — Miss Thomas was a lovely picture in rose pink gowns with hat to match. She carried an armful of pink gladiators. —Boston Transcript.

Scripture Lore.

Young Man (to girl who has managed to get a little dirt in her eye): "May I remove the mote from your eye?" Maiden: "Sir, first remove the beam from yours." —London Answers.

Evidently He Never Had.

"I don't see why you garage men can't be cheerful and pleasant when folks come into your place to do business with you," said the automobile owner. "Missus" replied the garage employee: "I guess you never worked in a garage." —Detroit Free Press.

Abyssinian Ballads.

In the remote country of Abyssinia the inhabitants are pagans, who believe in a divinity inhabiting the sky, and also in secondary gods dwelling on earth. Slavery is not officially recognized, but exists in fact, though with some limitations in form.

Intelligent Parrot.

Locke's "Essay on the Human Understanding" refers to a parrot which had the faculty for answering questions sensibly. When the governor of Brazil was introduced to it he asked the bird: "What do you do here?" "I look after chickens," was the ready reply. "You look after chickens?" roared the governor, with a burst of laughter. "Yes," retorted the bird, "and I know how to do it," at the same time clucking like a broody hen.

Not Much Left.

The world owes you a living, but the paymaster often gets held up by the waiters. —Boston Transcript.

Not a Criterion.

Remember, young man, that you can't tell by the rings on a girl's fingers how her hands will look with bluish dough on them. —Chicago News.

Character Not Hidden.

One observation is that when a girl is proud of her figure she simply refuses to erect a board fence around it. —Galveston News.

Enormous Punchbowl.

An enormous silver punchbowl in Windsor castle, which cost \$20,000, is capable of holding eight gallons and, on the occasion of the wedding of the prince of Wales (Edward VII), was filled with 210 bottles of mulled claret.

Perpetual Bloomer.

It may not be generally known, but it is a fact that the lemon tree of California blossoms throughout the year, so that buds, blossoms and fruit in all stages of ripening are to be seen on the tree at the same time.

When There is a Drought.

When in need of rain in Germany, farmers get out a complicated device and sprinkle the ground. A number of sprinklers attached to one long feed-pipe are drawn across a field. A pump supplies them with water and so a whole field may be watered at the same time.

Explaining the Change.

Little Hetty, her mother, and new daddy returned to the city after living on a ranch for several months. The child went to visit the Sunday school she had attended before she went away. The teacher was much surprised to see her and exclaimed, "Well, if here isn't Hetty McAnn!" With a very indignant gesture the child replied: "No, this isn't Hetty McAnn—it's Hetty Bryant; my mamma and I got married again."

This Fish a Fighter.

Muskellunge sometimes run up to one hundred pounds in weight, says the American Forestry Magazine, and to land one with rod and line is a feat not to be forgotten in a lifetime.

When You're Beaten.

No man is beaten until he releases his grip on his life aim. No man is beaten so long as he lives and works toward his goal, no matter whether he reaches it or not. —The New Success.

A Musical Discovery.

A large quantity of rusty piano wire, says a news item, has been found in a valuable milk cow at Boston Lincolnshire. There is hope that the "Tune the Cow Field of" may now be positively identified. —Punch London.

Favor Independent Inquiry.

When a new family moves into a neighborhood its head ought to give a biographical sketch of each member to the neighbors, so the latter won't have to worry about rumors. —Toledo Blade.

Land of the Sugar Maple.

The finest and most abundant growth of the sugar maple is found in the New England states, New York, northern and western Pennsylvania and westward throughout the region of the Great Lakes to Minnesota. In the southern Appalachians it grows well where climatic conditions are similar to those further north.

Beneficial Vegetables.

The value of dried uppers as a protective food is shown by experiments in the laboratory. The green leaf vegetables are next in value in the protection from scurvy. A small amount of cabbage added to an otherwise deficient ration will keep guinea pigs in good condition for more than a year. The third class of foods in the prevention of scurvy is the root vegetables. Onions, potatoes and carrots were found in the experiments to retain enough of the protective element to carry guinea pigs through reproduction.

WAR ON MOLES NETS PROFIT FOR FARMER

Fur of Animal Found to Be of Considerable Value.

Annual Damage by Rodents to Crops and Grain in the United States is Roughly Estimated to Amount to \$300,000,000.

Mole skins obtained from animals killed in the crusade fostered by the biological survey, United States Department of Agriculture, against crop destroying animals have netted \$20,000 to \$30,000 a year to farmers of Oregon and Washington. Moles and the many kinds of rodents do serious damage to grass and grain, and a campaign of extermination was started against them through cooperation of the biological survey and the states' relations service. As a by-product of extermination the fur of the mole was found to be of value. The pelt of the northwestern mole is superior to that of the Scotch mole, which began

Some American Moles Are Larger and Have Finer Pelts Than the European Animals Which Now Furnish the Bulk of the World's Supply of Mole skins.

They are used for fur garments. The fur of the Scotch mole is more costly than that of the American mole and has been in great demand.

The total annual damage by rodents to crops and grain in the United States is estimated roughly at \$300,000,000. This is being cut down by systematic poisoning campaigns in various sections. The territory covered in these campaigns in the last year amounted to about 3,000,000 acres. The saving to crops in the destruction of moles and of such rodents as prairie dogs, ground squirrels, pocket gophers, and jack rabbits is estimated to be \$10,000,000 a year.

RATS CAUSE ENORMOUS LOSS

Damage in Minnesota Estimated at \$12,000,000 Annually—Rodents Also Spread Disease.

Entomologists of the department of agriculture of the University of Minnesota say that Minnesota's financial loss from the depredations of rats is from \$10,000,000 to \$12,000,000 annually. State directors of agricultural extension work have estimated the losses on Montana at from \$15,000,000 to \$20,000,000; in North Dakota at \$4,000,000 or more; in Kansas \$12,000,000; in California \$20,000,000 and in Wyoming and Nevada at from 10 to 15 per cent of the value of all crops.

"In addition to this monumental loss of food products," says E. J. Winkler, of the division of economic zoology, University Farm, "rats spread disease, and efforts are being made by our state and city boards of health to reduce the number of these dangerous and destructive animals."

"Every citizen of Minnesota should feel the responsibility of doing his or her part by making new buildings rat-proof and by eliminating rubbish which harbors rats, as well as by an active campaign leading to their destruction both by trapping and poisoning."

SUPERIOR GRIT FOR POULTRY

Where Hard Material Is Supplied the Gizzard Is Made to Function More Accurately.

When grit for the poultry is purchased only grit of known hardness should be employed; always the greater the quantity of grit found in the droppings the greater the evidence of its softness. Hard grit is slowly valued, therefore the gizzard is made to function more accurately, and every organ of the hen, in consequence, functions more thoroughly. Less unassimilated feed is thrown off and more eggs result from perfectly ground and therefore assimilated feed. Naturally there is less feed required where all the feed is digested—namely all farm fowls, except where hard grit is provided, are wasteful in this respect.

WEED SEEDS HARM WOODLOTS

Just as Important to Eradicate Noxious Plants There as It Is in Any Family Garden.

It is just as profitable to remove weed seeds from the woodlot, as it is to weed the garden; besides you can burn the wood from the crooked, defective trees, and from those that are not good timber species.

FARMER NEEDS LETTER-HEAD

One of Neat and Attractive Appearance as Important as It Is for Progressive Merchant.

The progressive farmer needs a neat, attractive letter head for his business correspondence just as highly as the progressive merchant or other business man needs one. It is also one of the best advertising projects available.

PRICES GREATLY REDUCED FOR CHRISTMAS SHOPPERS

An unusual opportunity to purchase practical, high grade, Christmas presents around pre-war prices. These big reductions apply to our entire stock. A little money can again buy many fine standard things. Our store is brim-full of new goods, comprising a select assortment of seasonable apparel for men, young men and boys. Mountain Scenery.
 One of the principal charms of mountain scenery is its solitude.—*Rusk.*

Or Cellars.
 Some people can't even build castles in the air without adding wings to them.—*Parton.*

Proving Packer's Remark.
 Many a small man has around a big opinion of himself.—*Boston Transcript.*

Sandpaper's Point.
 In removing old paint, dampen the sandpaper with benzene and the work can be accomplished in less time.

So We've Noticed.
 The farther a inch is the more he is going to do tomorrow.—*Boston Transcript.*

Flavors for Wines.
 Greeks and Romans flavor their wines by steeping the leaves of clove and roses in the liquor until it acquires the odor.

Jem Macle's Record.
 One of the most remarkable records in the annals of pugilism was that of Jem Macle, who lost two contests out of six.

Or a "Situation."
 When a statement runs into a brick wall and seems no way to get over or under, he cuts a few sharp yelps and calls it a crisis.—*Baltimore Sun.*

Watch Expenditures.
 If he who is always hard up will but keep a record of his expenditures he may find that he is more lacking to sense than to dollars.

Well, Isn't That Correct?
 Toledo Blade—"It is the belief of some that when a dictionary and a thesaurus disagree, the dictionary that's wrong."—*Boston Transcript.*

Locating the Heart.
 "Home is where the heart is," remarked the man of sentiments. "Yes," commented Mr. Blinn, "that I wish my heart wouldn't keep my heart in my mouth."

Jud Thinkins.
 Jud Thinkins says the old-time statesman who sat down and wrote out his speeches with a pen wouldn't stand any chance whatever in these days of handshaking.

What He Meant.
 It is probably never necessary to explain that the difference between a man and a woman is that the man is a woman's man and the woman is a man's woman.—*Lyons Item.*

Have Faith in Cross of Money.
 On the island of Rhodes, the has hand turned across in favor over the door before his new bride enters the house, and this little operation is said to guarantee their eternal happiness.

Remarkable Wild Flower.
 Hungary grows a wild flower which in the exact form of a humming bird. The breast is green, the throat yellow, the head and back almost black.

Turning the Luck.
 In Yorkshire country folk cross their thumbs "to turn the luck" should they meet a single woman. In Scotland a single man near a dwelling is believed to portend death to one of the inmates.

Beginning of Ballooning.
 To inclose smoke in a bag so that it would lift the bag with its own ascending power, was the idea of the paper makers, the brothers Montgolfier, and they got so far in their invention as to cause the bag which they invented to rise to the ceiling, and improving upon this they invented a machine that was a balloon, and was the forerunner of the inflammable air balloon.

Color Note.
 "The sun has a trumpet in its hand," sings a poet. "No," the poet trumpet, that's false. It's a false trumpet.—*Boston Transcript.*

In His Favorite Language.
 "An altruist, Tommy, is one who sacrifices his own interest to the interest of his fellow man." "I got yer, He's a guy what makes a sacrifice fit."—*Boston Transcript.*

Movement of Solar System.
 Astronomers agree on the fact that the sun is moving through space toward a point in Lyra with a velocity of about 12 miles a second. The whole solar system is necessarily involved in this motion.

How Do You Know?
 Yes, Horatio, it is a true saying that if you put the two men in the same bed, one with the toothache and the other in love, the man with the toothache will go to sleep first.—*Hamilton Herald.*

Savages Poor Physically.
 The natives of the African jungle, instead of being the lusty savages of imagination, are for the most part physically below par. The majority of them are malnourished and diseased and marked physical defects are common.

One of Nature's Acrobats.
 The weasel has been called the acrobat of nature and performs every kind of acrobatic feat. The bloodthirsty little villain is no coward. It will attack human beings. The weasel can climb as easily as run and is at home on any surface.

Different Kinds of Hickory.
 Twelve kinds of hickory are found in the world, eleven of them indigenous to the United States east of the Rocky mountains, and one Mexican species. Previous to the ice age, extensive forests of hickory existed in Greenland.

Sunday Men Unlucky Day.
 Europeans have a tendency to have been hounded by bad luck on Sundays. September 1, 1875, the day the Irish invaded the Americas was a Sunday; it was on a Sunday that she learned the news of the death of the prince Imperial, and she herself died on a Sunday.

Painting on Spider Web.
 Painting on spider web is done in Norway and the pictures are framed like any other. The webs employed, which are of a very dense weave are found only in few localities. The difficulty of access and the supply of them is limited.

Chinese Mail Service.
 In the interior of China except in a few districts there is no regular letter delivery and consequently no postmen. But many of the officials maintain some kind of service of their own and keep their runners up to the mark by strictly enforcing known laws to the Chinese.

Fishy.
 Superstition told she was with her husband for showing himself "in form of purpose," we don't believe Lady Macbeth called her husband "a poor fish"—though a country newspaper quotes her as exclaiming: "Infern infernal, give me the dagger!"—*Boston Transcript.*

Chinese Barber.
 The Chinese are not accustomed to tipping the barber. As a matter of fact the Chinese barber is very modest in his prices, and his patrons can obtain a hair cut, a head shave, a face shave, and in addition have his shoulders and back massaged, all for a sum total of less than 5 cents. The straight razor used by Chinese barbers is a triangular shaped blade with straight handle, folding up as does the American straight razor. The blades are made from old rails or any other crude steel which has utilized its usefulness in other directions.

Women Succeed as Foresters.
 In the various and gatherings of persons identical with the lumber industry which have taken place recently women have played an important part. They are said to make excellent foresters where the pursuit is recreational.

Ghoulish.
 A set of small dice supposed to have been cut from the molar teeth of a notorious French criminal and professional gambler, who died by the gallows, together with a dice box made from a tanned piece of his skin, was one of the curiosities displayed of by a Paris casino dealer.

Absurd Aviation Theory.
 Cayville, who writes about 1785, makes frequent allusion to the irrational attempts and false theories advanced by the projectors of flying instruments. One writer suggests that a great number of eggshells shall be filled with dew, for as the sun rarefies the dew it will ascend and carry with it the egg shells which would rise together with some other weight attached.

The Raccoon.
 The raccoon, or coon, as he is more commonly called in the United States, where he makes his home, has the odd little habit of dipping his head in water, as if to wash it perfectly clean, before eating. Coons den up for the winter like bears, sometimes singly, sometimes several together as if for company, in a hollow tree or other convenient place.

Speedy Animals.
 Two of the fastest of the smaller animals are the greyhound and the greyhound. The greyhound can go at the rate of 32 miles an hour, while the greyhound, the fastest of the small animals, can beat him by five miles and has much greater powers of endurance. The greyhound like the horse, has in with his forefeet and uses his front legs for pushing as well as pushing with his hind legs. The jack rabbit's front legs are only crutches, but like the antelope, he makes up for it by the power of his hind legs.

Porpoise a Fast Swimmer.
 There is another animal that is so fast no one has ever been able to find out how fast he is. This is the porpoise. The porpoise can do stunts in front of the fastest fish that travels the ocean, and he does them in its through after several hours of slowling to three or four and nonstop swimming between the surface and the bottom. The porpoise will do his tricks under the bow of a ship and under the bow of a 22-knot motor launch. He is like the antelope in that he sets his pace according to the speed of the pursuer.

A Stiff Upper Lip.
 Keeping a stiff upper lip is all right, but there's nothing commendable about it. Everybody keeps a stiff upper lip; has to. The upper lip can't be anything but firm. Ever watch a child overcome by emotion? It's the upper lip that trembles, and then the few drops, to open an exit for the tears. Next time tell him to keep a stiff lower lip. It won't sound right, it will look funny and probably will fall to inspire the subject to the proper degree of steadfastness, but you'll have the approval of the priest.—*Louisville Herald.*

Bird Outruns Horse.
 Anyone who has traveled through western Texas becomes familiar with the mesquite tree, or, as it is sometimes known, a shrub. In some places where it may grow to be 30 or 40 feet high, it is commonly known as the chaparral, says the American Forestry Magazine of Washington. Here it is certainly and luscious into dense clumps, it being the home of that famous bird the "road-runner" or chaparral cock, and other species. The road runner is really a big ground cuckoo, that only takes to flight when hard pressed, while on open ground it can run so fast that an ordinary horse cannot keep up.

"Cien Cien"
 This was the cry of a group of oak leaves at the foot of a tree. It was one of the first highly visible signs of a Roman conquest. It was a cry for saving the life of a Roman in battle, at the same time, it was the cry of the Roman and maintaining the Roman flag which the Roman flag was, that is, when it was given to the Roman flag.

Oyster Gatherers.
 It takes three laborers to supply the American public with its customary first dinner course, says Luther C. Fry, writing in World's Work. This force includes entire families as well as single men. The father works on the boats, which gather the oysters by dredging or tonging. His wife and children can and prepare them for market.

Power in Solitude.
 Solitude is the seed of solemn thoughts and great deeds. Moses tends sheep on the lonely hills for years before he beholds the Burning Bush. He thinks that alone to write the tables of the law. Cromwell follows the plow as a hired man until he is fifty. Then he steers the Puritan revolution which tamed those United States.—*Boston Herald.*

To Whiten Doorsteps.
 The following preparation for whitening doorsteps is a great labor saver, as only very hard rain will remove it. Place one pound of powdered lime in a saucepan with one and one-half pints of water and heat over a slow fire. When dissolved add one pound of powdered whiting stirring it in gradually. Put this mixture on the steps with a strong brush, and if it is too stiff add a little more water.

Safeguarding the Children.
 Frederick Martineau, American explorer, just returned from Central Europe, tells of methods employed by natives to protect young children from wild bear, lion, and other dangerous beasts. The children are swathed in garments made of raw cotton vines suspended from trees. Crude dyes take a form of children in the forest, and the explorer, despite precautions, is lost.

Where They Came From.
 The silk seems to have originated from the Mediterranean particularly in Syria. The grape is native in southern Europe, Algeria, Morocco and western Asia. The rest of the world grows wild silk. The rest of the world grows wild silk. The rest of the world grows wild silk. The rest of the world grows wild silk. The rest of the world grows wild silk.

Stingiest Person.
 A man in our neighborhood recently became interested in receiving a good position and at the end of the first week's pay his father presented him with a bill containing the expense of the year, and ever since he was born, according to the expense of the attending physician when he came into the world, this was all added up and compounded interest was charged. The boy without a murmur has begun to pay it all back to his father. The amount would buy a nice home.—*Chicago American.*

Age and Development.
 Study of the relation between the total length of life and the time required to reach maturity has brought out an interesting comparison between men and horses. A horse at five years old is said to be, comparatively, as old as a man at twenty, and doubtless may be expected to behave, according to equine standards, after the manner of the average college student following those standards. A ten-year-old horse resembles, so far as age and experience go, a man of forty, while a horse that has attained the ripe age of thirty-five is comparable with a man of ninety.

The One Answering Topic.
 The reason some people don't talk more than they do is that they can't think of anything to say about themselves.—*Boston Transcript.*

House Fly's Wonderful Eye.
 "The eye of a common house fly has 10,000 facets, and it can be that each facet registers a complete image. If this is true," says Miss Booth, the common photograph plate which registers everything that comes before it, is a rather amazing occurrence."

Revolutionary Plot.
 According to the latest edition of a weekly paper, a plot was hatched from revolutionaries to overthrow the government of the United States. The plot was hatched from revolutionaries to overthrow the government of the United States. The plot was hatched from revolutionaries to overthrow the government of the United States.

"Between Deer and Deep Sea."
 "The deer is the devil and the deep sea is the devil's brother," says a proverb. The deer is the devil and the deep sea is the devil's brother. The deer is the devil and the deep sea is the devil's brother. The deer is the devil and the deep sea is the devil's brother.

Explaining the Change.
 Little Betsy, her mother and new daily returned to the city after living on a ranch for several months. The child went to visit the Sunday school she had attended before she went away. The teacher was much surprised to see her and exclaimed: "Well, if there isn't Betsy McArthur!" With a very indignant gesture the child replied: "No, this isn't Betsy McArthur's. Betsy McArthur's my mamma and I got married night."

Poverty and Splendor.
 I was once poor, when I supposed to live in splendor. Poverty has in large cities very different appearances, it is often concealed in splendor, and often in extravagance. It is the case of a great part of mankind to conceal their indigence from the rest; they support themselves by temporary expedients and every day is lost in contrivance for the tomorrow.—*Dr. Samuel Johnson.*

New Artificial Silk.
 Animal material that is the peculiar material of an artificial silk. The existing material is dissolved away, and the separated fiber is then strengthened in a suitable liquid. Fibers several inches long are said to have been obtained. These are woven in the usual way and if desired, the fabric may be waterproofed by impregnation with rubber. Such silk is claimed to be not very expensive, and adapted for such purposes as insulation and insulation cloth.

The Fast Age.
 "The world never moved so fast before," says Mr. Jones. "We have winter here in the month of July, spring vegetables in Christmas, we buy our straw hats in February and our felt hats in August; we get our Sunday papers on Monday night, and our magazines a month ahead of time. If we telephone a man in San Francisco from New York, he hears our voice about four hours before we speak, and if some one in Japan sends us a telegram tomorrow, we get it today."

Barriers of Tuberculosis.
 Tuberculosis is a house disease. As Doctor Apple says: "The stable cat, the house cat, the tame dog, the tiger of the household are almost invariably out of tuberculosis infection." This disease has existed from remote antiquity and if one estimates the number of those it has cost he can form some conception of the terrible price humanity has paid to learn that men and animals need pure air instead of poison to live.

Simplicity.
 In character is richness. In style, in all things, the supreme excellence is simplicity.—*Longfellow.*

Education.
 Education is the teaching of human words to what is best and making what is best out of them and those two things are always inseparable together and by the same means. The training which makes most progress in the world is that which makes most service of others.—*Ruskin.*

New Ocean Danger.
 Little Harold, a boy living on the lake shore, had a terrible accident. He was out of the water and his mother went into the water and Harold old swam out of her from the shore. "Mother, don't go in there, there's a big monster down there and it might bite you."

An Egyptian Orchestra.
 A full Egyptian orchestra was composed of twenty harps, eight lutes, five or six flutes, six or seven double pipes, five or six flutes, one or two pipes (trumpets), two or three tambourines, and a cymbal. If vocalists were added, which was not necessary, the whole would number about three hundred as many as the harpers.

Big Demand for Maple.
 Maple appears in fifty of the fifty-five industries into which the uses of wood in the United States are generally divided. No other wood has a record so nearly approaching universal use. Oak, red gum, basswood and larch approach maple, but fall a little short. It appears in a few industries where they are not found. Maple lends all other woods of the United States in the industry which produces boat and shoe bolters.

Odd Names for Fish.
 The names of the fish in the red fish, then we have the striped bass which has several common names, says the American Fisheries Magazine. All of our snappers, of which the common pompano and rock bass are an example have been designated as various kinds of basses, and there is the brown bass, the white bass, often confused with the striped, the silver bass is another name for the "moon-eye."

Profit in Coining Money.
 The government does not profit at all when gold coins are minted, because it has no interest in them; it is virtually the same as the mint. The profit on gold coins depends on the cost of the government of the silver that goes into the dollar. When silver is above \$1.20 an ounce there is a profit. When it is below a dollar the profit is considerable. On lost dollars and one-cent pieces the profit on gold is large.

"Tough as Hickory."
 "Tough as hickory" is a phrase suggesting the peculiar strength and elasticity of the hickory wood and it may be for that reason your favorite, Glen, Andrew Jackson, was fondly called "Old Hickory" by his soldiers because of his tough, unyielding disposition. This nickname may have been bestowed during the war with the Creek Indians in 1813, when he fed his men on hickory nuts over a period when they were short of rice.

Spread of Bathing in Europe.
 Bathing came to Europe as one of the good results of the Crusades. The Knights of the Cross found baths in general use among the Saracens, and seeing what good things they were, on returning from those wars took the initiative for their introduction. In this they were highly successful first in England and from that to other countries. So popular did the bath become that it became customary to have one before ceremonies such as marriage or knighthood, and the people have been ever since learning the value of keeping their skins clean.

HALF
PRICE

HALF
PRICE

WE HAVE JUST PUT ON SALE SIXTY OF THE WOOLTEX LATEST AND BEST STYLE WINTER COATS AT EXACTLY HALF PRICE. THESE WERE SELECTED FROM A THOUSAND NEW COATS. THE MATERIALS ARE CHAMOSTYNE, FROST GLOW, PEACH BLOOM, SUDETEN, CASHMERSTYNE, MARVELLA, RIPPLETTE, Etc.

PRICES WERE \$49.50 TO \$165.00 AND NOW WILL BE

JUST ONE HALF THESE PRICES

WHEN YOU BUY A WOOLTEX COAT AT HALF PRICE YOU ARE GETTING ABSOLUTELY THE BEST POSSIBLE VALUE IN COATS.

A. B. ROBERTSON & BRO.

DANVILLE, KENTUCKY.

DR. VREELAND

Sees Danger Of Working Convicts Of Roads.

Rev. Walter Q. Vreeland, of ten years chaplain of the state reformatory at Frankfort, and at present pastor of the Methodist church at Simpsonville, Ky., has sent the following to Hon. H. Green Garrett, chairman of the state highway commission.

Honorable H. Green Garrett, Chairman, State Highway Commission, Winchester, Kentucky. My Dear Sir: For the ten years immediately preceding June the 1st, 1920, I was chaplain of the state reformatory at Frankfort. In those years I became very much interested in the work of reformation of prisoners and made many warm friendships among those who were unfortunate enough to be there under sentences.

Although, no longer officially connected with the prison administration in Kentucky, nevertheless, I still have a deep concern in its welfare.

Early in the month of October I read in the city daily papers that it was proposed by the state road department to ask the State Board of Charities and Corrections for an additional five hundred men to be worked on the public roads in the near future.

When I read the article, felt impelled to write to the road department, as well as the State Board of Charities and Corrections, respectfully calling their attention to the dangers that seemed to me to threaten both the inmates and prison administration by such an unfortunate move.

However, I did not write the letter but recently when looking over the Sunday Courier-Journal of October the 11th, my attention was again called to the subject of an article in that paper urging the public into the death in Harlan county of Miss Parsons, Fine Mountain Settlement School teacher, who was recently assaulted and murdered. I am enclosing you a copy of that article.

The events narrated in the article show very plainly how easy it is to meet the finger of suspicion at men once convicted of crime, who happen to be in the vicinity where a new crime is committed.

The article also illustrates the practical impossibility of having direct supervision over convicts while in road work, as well as the impossibility of preventing the evils of gambling among men so quartered and so scattered.

As long as convicts are confined within the walls of the state reformatory, it is possible for the watchful eyes of the prison warden, prison physician and prison chaplain to study each individual convict to gauge his mental, moral and spiritual condition, and to adapt the treatment he requires to his individual needs, so that in a few years, he becomes eligible to parole and also industriously, morally and spiritually equipped for it. He can then be released without guard, and permitted to re-establish himself in society under the supervision of parole officers, or if he violates his parole, he may be returned to the reformatory.

However, with the convict population of the state scattered about in different counties, into widely separated road camps in the same county, and even in smaller scattered groups of the same road camp, the convict is removed many miles from the watchful care of the prison warden, prison physician and prison chaplain.

He is entrusted to the custodianship of guards who know rarely anything of modern penology, who have never studied or thought of the psychology of crime or the graduation that the convict passes through from criminality to repentance and parole.

In road camps, the housing and sanitary condition of such camps are necessarily bad, and cannot be favorably compared with similar conveniences of an established reformatory.

The visit of the physician to the camp is occasional and he is only called in when a convict is ill. The chaplain sees him rarely, if at all, in the road camps. No provision is made, nor is it practical to make any for religious instructions and services in road camps.

In the road camps, the men are taken from a central point of residence and labor, away from the prison where system and order are being taught, away from the night school where educational instruction is given and the principles of morality inculcated.

In the road camps, the convicts lose the personal contact with the chaplain and are denied the Sunday services that are possible within the reformatory.

In any community into which convicts are sent, the tendency is that the presence of the convicts terrorizes a large part of it and women and children are haunted by fear. On the other hand, the danger to the convicts is the tendency to charge upon the convict camp any and all crimes that are committed near it.

The exposure of the convict to the idle gaze of all who pass him on the road, exposes him of needless humiliation and the effect of it is to gradually harden him and make him careless of the opinion of the public.

As one who has had ten years experience as chaplain of the reformatory, I very strongly urge you to reconsider the policy of sending these men out into road camps. The public should not be subjected to the temptation which such a situation produces.

In my opinion until paroled, the best place for the convict is within the walls of the penitentiary where he can come in daily contact with the discipline, the sobering, the healthful and the spiritual aid of the warden, the prison physician and the prison chaplain of that which the convict is necessarily deprived as soon as you send him upon the public highways.

The life of just one little girl or one settlement worker is too great a price to pay for the experiment of working convicts on the public roads.

Very truly yours,
Walter Q. Vreeland
Reformatory Chaplain

“WELL, OLD MAN, HOW ARE YOU?”

If Your Blood Is Rich And Red, You Say, “Fine.”

ENTHUSIASM IS RED-BLOODED.

Try Pepto-Mangan If You Feel Weak And Look Pale.

Sometimes you are almost down and out. You know you are not really sick, but you have a petered-out feeling. You eat little. You drag along. In the morning you look at your face in the mirror. You feel years older when you see how pale and haggard you are.

It is your blood. It needs red corpuscles. Instead of poking along half sick, why don't you try taking Pepto-Mangan, the blood tonic? It has just the ingredients weak blood needs. With red blood your energy and enthusiasm return. You eat better. You tackle work and achieve.

Pepto-Mangan is widely and heartily endorsed by physicians. It is effective and easy to take. It is sold in both liquid and tablet form. The medical properties are identical.

Sold at any drug store. But be sure to get the genuine Pepto-Mangan. “Gude's.” Ask for it by the name and be sure the full name, “Gude's Pepto-Mangan,” is on the package. (Advertisement)

GUNN'S CHAPEL.

Master Clemens May is quite ill. Master Clyde Matthews is ill with pneumonia.

Mr. Ben Humphrey who has been ill is improving. An infant child of Mr. Jesse Glenn is quite sick.

Miss Iva Hallon spent the week-end with Mrs. John Land.

Prof. and Mrs. Elliott Crantell were guests of Mr. and Mrs. H. M. Kurtz Monday night.

Mrs. Harvey Teater, Mr. Hugh Noel, Misses Jessie H. Ray, Bernice and Bessie Teater motored to Lexington Monday shopping.

Mr. Elmer Ray Misses Jessie B. Ray and the Misses Teater were the guests of Mr. and Mrs. Ed. Warner near Round Hill for the week-end.

Mr. and Mrs. Frank Land, Mr. Howard Land, Mr. and Mrs. John Land and baby and Misses Inez Land Lavinia Montgomery and Iva Hallon were guests of Mr. and Mrs. Ed. Naylor and family Sunday.

“Do unto others as you would have them do unto you,” said the young man as he snatched a kiss. But she boxed his ears instead.

It is quite true that woman has a greater influence over man than money, especially if she is his affinity.

When two braggarts engage in a wordy war each one furnishes his own applause.

In expressing your thanks for the good things that are yours on Christmas morn, don't forget that the greatest of these are life and health.

If there is a soul in this community without the wherewithal to get a good Christmas dinner he should have the dinner without the where, etc.

Lancaster Pleased By Quick Results

Everyone is pleased with the quick results of simple witchhazel, camphor, hydrastis, etc., as mixed in Lavoptik eye wash. One man's eyes were so badly strained he could not read without pain. Two applications relieved him. A lady with weak, inflamed eyes was greatly helped by ONE bottle. We guarantee a small bottle of Lavoptik to help ANY CASE weak, strained or inflamed eyes. R. E. McRobert's Drug Store. (Advertisement)

POOR RIDGE

Miss Anna Brock has been ill.

Mrs. James Sparks continues quite ill at this writing.

R. P. Long bought the farm of V. L. Sanders, price unknown.

Mr. Oren Whittaker was the week end guest of Madison relatives.

Mr. and Mrs. Ed. Agers and children of Indiana are visiting relatives here.

Mr. and Mrs. L. L. Matthews were guests Sunday of Mr. and Mrs. Wm. Matthews.

Miss Ida Speake spent one night recently with her cousin, Miss Anna Mae Speake.

Miss Christine Preston was the pleasant guest of Miss Arleigh Matthews Sunday.

Mr. and Mrs. Newton Grow spent the day Monday with Mr. and Mrs. Lige Bolton.

Mr. and Mrs. Ike Duncan and children spent Sunday with Mr. and Mrs. Wm. Whittaker.

Mr. and Mrs. Lora Irvine spent Sunday with her parents, Mr. and Mrs. John Simpson.

Mr. and Mrs. Preston Snyder and children and Mr. and Mrs. Cleo Ray and children spent Sunday with Mr. and Mrs. Eddie Ray.

John W. Vogel's big Minstrel—All White Performers at the Lancaster Opera House, one night only, Tuesday, Dec. 21st. Street parade at noon. Show starts at 8 o'clock.

Cracks at Creation.

Talk is cheap at a safe distance.

Soon, now, we'll be forgetting to write it 1921.

Patience we suspect, is an over-strained virtue when waiting for a rich relative to kick off.

It requires real strength of character to be an optimist when the Christmas holidays begin to float in.

“The end of the profligate is at hand,” yelps an enthusiast. Sure, he will be known by another name.

The government continues to insist that prices are coming down, but not at the speed at which they went up.

The good book tells us to love our neighbors as ourselves. But that, in some cases, might be rough on the neighbor.

“All work and no play makes Jack a dull boy,” they say. And, we might add, all play and no work makes him a mollycoddle.

The world is short of leaders, says an exchange. But perhaps that can be accounted for by the fact that the world objects to being led.

President Wilson has agreed to act as mediator in the Armenian question—that is, if there is anything left of the Armenians but a question.

Big city newspapers are howling mightily over the awful crime wave. As an antidote they might come to this town and live in peace, plenty and security.

The Fast Age.

“The world never moved as fast before,” mused Mr. Simmons. “We have winter ice on the Fourth of July, spring vegetables on Christmas; we buy our straw hats in February and our felt hats in August; we get our Sunday paper on Saturday night, and our magazines a month ahead of time. If we telephone a man in San Francisco from New York, he hears our voice about four hours before we speak; and if some one in Japan sends us a cablegram tomorrow, we get it today.”

Can Elephant Jump?

Although they are generally believed to be able to do so it is impossible, owing to weight and structure, for an elephant to jump either up or forward. A big elephant makes 6 feet 9 inches in a stride, but a 7 foot trench would be as hopeless a barrier to it as one of 50 feet.

Pathetic Appeal.

Mary's house had been struck by lightning and pretty badly damaged. The next evening when Mary was praying at mother's knee she asked a blessing on each member of the family and then said: "And God, please don't be mad at us any more."—Exchange.

Cut Your Butter Bills

NUCOA

The Original Nut Butter

NUCOA is churned from the sweet meat of coconuts in pasteurized milk—the result is a most appetizing and delicious nut butter that everyone in the family is glad to see come to the table. Children love it, throw-ups prefer it.

NUCOA Meets Every Butter Requirement

NUCOA is unsalted for cooking or baking 365 days in the year. Keeps its rich, butter-like flavor down to the last pat in both winter and summer. NOTE—If your grocer hasn't NUCOA send us his name and we'll send you a pound FREE.

American Butter & Cheese Co.

INCORPORATED

133 E. Jefferson St.

LOUISVILLE, KY.

FARMERS

Ship your cream to a creamery and use NUCO's milk at home. There are three advantages in doing this. Cream brings high prices. NUCO's costs less. You save the time and effort of making butter. Many farmers are making a big profit in this manner. Why not you? NUCO's will delight you.

REGULAR GROWTH OF CLUBS DURING 1920

Exodus From Country to City Is
Being Checked.

Agriculture Dignified in Eyes of
Thousands of Boys and Girls and
Brings New Interest Into
Lives of Members

During the last six months in 1920, 18,000 boys and girls in the northern and western states enrolled in the clubs which are supervised by the United States Department of Agriculture and the state colleges. The large enrollment in these clubs promises that soon, possibly before the next census is taken, the exodus from the country to the city will be definitely checked. This work has already dignified agriculture in the eyes of thousands upon thousands of farm boys and girls, and made them satisfied with country life. The organization brings new interest

Members of Pig Club Being Shown
Fine Points.

into the lives of its members and enables them to make money of their own. While club work encourages boys and girls to procure a higher education if possible, 287 northern and western club boys and 607 club girls are in agricultural colleges this year. It does not detract them away from the farm.

One per cent of the total population of the country, or 1,011,411 persons, were reached the last six months of the current year through the juvenile club system. When the boys and girls sit out on an exhibit it is popular with all ages and all ages attend. The work in the clubs was carried on by 171 permanent county club agents and 8,046 volunteer local leaders. The number of permanent club agents has nearly doubled in six months. Large numbers of farm boys now are paying the salary of a club leader as well as that of a county agent and home demonstration agent.

PIGS REDUCE HUSKING COSTS

"Hogging Down" Corn Shown to Be
Profitable by Test Made at
North Dakota College.

Here is another bit of evidence received at University farm that "hogging down" corn is good business for many growers of hogs and corn. The North Dakota Agricultural college obtained a return of \$15.51 an acre by using 18 hogs to hog down 16 acres of blue corn in 1918, according to J. H. Sheppard of the experiment station. The hogs were turned into the field September 10 when they averaged 100 pounds in weight, and left there until November 12. They made an average gain of 94 pounds or a gain of 281.75 pounds per acre. They were marketed at 14.31 cents, which, allowing for shrinkage, gave a return of \$15.54 per acre. These results are in line with those obtained by the Minnesota experiment station.

SKUNKS WILL YIELD PROFIT

Besides Destroying Mice, Grasshoppers
and Other Insects Their
Fur Is Valuable

Farming is supposed to deal only with domesticated animals. Few persons have considered establishing friendly relations with the skunk, although it has been done under the misapprehension that the animal was a pest.

Skunks destroy mice, grasshoppers, crickets and white grubs and yield a very valuable fur. A couple of dozen skunks ranging around the farm will produce \$100 worth of fur and save much money by the animals that they kill. If the skunks are kept in skunk-proof yards, their dens respect of and not used when meeting them in the dark, a profitable side line will be added to the farm income.

MARKETING BY PARCEL POST

It Should Be Remembered That Not
All Farm Products Can Be
Handled in This Manner.

While it may be attractive in a city dweller to believe that he can have a vegetable garden grown for him 100 miles or 150 miles away, place his orders for the cost of a stamp, and have the produce delivered at his door, it should be remembered that not all farm products lend themselves to direct marketing by parcel post. Usually it is impracticable to market such heavy products as potatoes by parcel post, whereas eggs, butter, sausage, poultry, many vegetables and meats may frequently be shipped with profit and at a saving to the purchaser.

Paying His Debt

By CECILLE LANGDON

Paul Verhees seemed darkly as young Alton Verhees came up the path leading to the old-fashioned farmhouse. He was a handsome, well-built young fellow, and under the circumstances most persons, remembering his recent affliction in the loss of a father and a fortune, would have shown some sentiment of pity and sympathy.

"He kind and considerate to him father," spoke Paul Verhees in a low but urgent tone. "He is not to blame for your loss."

"The son should share the burden," retorted Verhees sternly. "With my limited means and income two thousand dollars means something, I can tell you."

The quiet, dignified manner of the visitor, however, disarmed, or at least subdued the irritation and resentment that Paul Verhees experienced.

"I have come to tell you, Mr. Verhees," he said, "that I have voluntarily assumed the full payment of the money my father owes you. As to your claim I shall consider the matter binding for me to pay. I have sold my few personal belongings and have acquired five hundred dollars. I will pay this on account or I will accept as capital to earn the full amount."

"What do you mean by that?" inquired Verhees in a puzzled but urgent way.

"Give me charge of that sum, a part of your time, for a year, and me in trouble some modern methods I have learned out and I can absolutely promise the speedy extinguishment of the last vestige of the debt. Having no other prospect, I would have purchased those woods acres of yours on the river. He treated the soil of a peculiar quality and admirably adapted to the production of a fine, rich, red soil, which gives a product that can be transformed into the purest sugar known to chemistry. The best supply of this superior sugar—charlotte product—now brings over five dollars a pound in experimental laboratory prices. I have the details of these plans. Let me thoroughly convince you that it can be made a positive success."

There was an element of the speaker in Paul Verhees and the longer he talked with Alton Verhees the more was he inclined to go into the scheme proposed. All the time Paul Verhees sat in the next room busy at some embroidery work but she could overhear all that was said and was deeply interested.

That old cabin on the river shore as last the home for me until I prove up," spoke Verhees. "If you can spare a few articles of furniture and an old stove, I can fix it up superbly and build on that timber existence."

The young man was done to earnest in all he said and pleased Verhees and evoked his profound admiration by the way he centered into his new employment. Verhees allowed him to invest the five hundred dollars. Two cowmen, men were hired and in a week the proposition was well on its way to a development of the incipient stages of plowing, planting and cultivation.

Every morning for a week after Verhees had left the cabin Paul Verhees and the horse servant visited the place and devoted an hour or two toward putting it in order. She supplied cheap but neat curtain adapted to the old rug to the scented sitting room and added a rocker and other comforts and conveniences that cheered Verhees greatly and caused him to take a transient interest in the thoughtful, practical character of his employer.

"Say," observed Verhees one day, glancing about the renovated cabin, "Paul Verhees has just about made a little place of the old shack."

"I certainly appreciate her kind efforts to make the something more than comfortable," responded Verhees warmly.

Time passed on. Every day Paul Verhees and Alton saw something of one another and she gradually became a looked-for and cherished element in his life. She was of a retiring disposition, inclined to shyness in meeting Verhees, but outspoken and enthusiastic in discussing the prospects of his success with her father.

"It figures out all right," declared Mr. Verhees at the end of the season. "The plants have thriven, the refinery we have sent the plants to report excellent results, and this year's crop alone will more than pay me back the two thousand dollars."

"And then, what is Mr. Verhees going to do?" inquired Paul Verhees and with a secret interest her father could not help but observe.

"Well, daughter," replied the old man, "I had quite a talk with him today. I have offered to take him in to a partnership and he has agreed. He is going to give up the cabin to his wife and become our guest at the house. Will that suit you?"

Paul Verhees assented, flushing slightly. The hands of interest between girl and man were becoming stronger as time went on. It was about a month later that Alton came to Mr. Verhees and said seriously:

"I am learning to love Paul Verhees more and more each passing day. Can I tell her so?"

"She probably knows it already," replied the shrewd old man. "Alton Verhees, you have nobly redeemed your pledge to pay up that old claim. You are a man, every inch of you. There is room here for the right sort of a son-in-law—so welcome."

BUCKEYE (Delayed.)

Mr. and Mrs. T. S. Pieratt spent Sunday with relatives near Richmond.
Mr. J. P. Prather has been visiting relatives in Lexington and Richmond.
Mrs. Jesse Hill and Mr. Reather, who have been sick, are improving.
Mrs. Reather Ray and daughter have been visiting Mrs. Wiley in Madison County.
Mr. and Mrs. A. T. Miles were in Nicholasville with relatives from Thursday until Monday and attended the Baptist meeting there.
Mr. Forest Curtis and daughter, Miss Margaret, of Bryansville, Carl Curtis, of Lancaster, Mr. and Mrs. L. L. Sanders and son, of Crab Orchard, visited Mr. and Mrs. Hiram Ray Sunday.

MR. DALTON COMES TO THE FRONT.

Tells His Friends and Neighbors of His Experience.

Every Lancaster resident should read what Mr. Dalton says, and follow his example. He has used Doan's Kidney Pills and speaks from experience. Is there any need to experiment with imitations or untried kidney medicines?
J. W. Dalton, farmer, Crab Orchard, Ky., says: "Some time ago I had trouble with my kidneys. My back ached and was sore and lame and my kidneys were irregular in action. I bought Doan's Kidney Pills at H. E. McRobert's Sons Drug Store and used them. The backache left me and my kidneys were soon put in good order. I have had no return of the trouble."
Please note, at all dealers. Don't simply ask for a kidney remedy—get Doan's Kidney Pills—the same that Mr. Dalton had. Foster-McMillan Co., Mfrs., Buffalo, N. Y.

CARTERSVILLE. (Delayed.)

Mrs. Clarence Green is very ill with pneumonia.
Mrs. Holcomb has been very ill for the past few days.
Miss Rena Foynter spent Thanksgiving with her home folk at Richmond.
M. and Mrs. John Calico are rejoicing over the arrival of a son, born on

the 2nd.

The hog killing season has begun, quite a few were killed last week in our community.
Mrs. John Land and little son were the pleasant guests of Mr. and Mrs. T. S. Roop last week.
Mr. and Mrs. Alex Johnson, of Pineville, attended the burial of their brother, N. B. Turner.
Rev. Goodrich and wife, Rev. Moser and wife held services at Carter's Chapel at the annual meeting.
Mr. Foster Johnson and daughter and son, Mrs. Francis Rogers and daughter, Una, of Richmond attended the burial of their brother and uncle, N. B. Turner.
The Thanksgiving program rendered at the school house, Nov. 24th, was a huge success. Among the features of the program the play, "Our First Thanksgiving" was the most effective.

The Death Angel swooped down upon the home of N. B. Turner and took for its victim the beloved father, who had been ill for a few days but apparently seemed better. He leaves a devoted wife and six children, he side two half sisters to mourn his loss. Not long ago he celebrated his 77th birthday. The community extend their sympathy to the bereaved family. We loved him, yes we loved him. But Angels loved him more. And they have sweetly called him, To yonder shining shore.

New Ocean Danger.
Little Harold, 5, was vacationing at the lake shore. He overheard his elders remark about the terrible undertow near the pier. The next day his mother went into the water and Harold screamed at her from the shore: "Oh, mother, don't go in there; there's a big undertow there and it might bite you."

STORMES DRUG STORE

COMMISSIONER'S SALE OF LAND

GARRARD CIRCUIT COURT.
Mary E. Morgan, et al. Plaintiff,
VS.
Johnetta Morgan's Guardian, Defendant.

Pursuant to a judgment rendered at the November Term, 1920, the undersigned Commissioner will sell at public auction to the highest and best bidder, before the Court House door in Lancaster, Kentucky, at 11 o'clock A. M., or thereabouts, on MONDAY, DECEMBER 27, 1920, being the first day of the Garrard County Court Term, the real estate mentioned in the pleadings and described as follows:

Located and being in Garrard County, Kentucky, on the head waters of Black Creek, and bounded as follows: Beginning at an elm tree near the dwelling house; thence East with fence to the fence on line of O. T. Wallace farm; thence South with fence on Wallace farm and Burnside to Burnside's line; thence North with the fence to Gough and Morgan line; thence West to the elm tree, the beginning, supposed to contain 10 acres more or less.

This is the same property conveyed to Mary E. Morgan and Johnetta Morgan, by J. C. Morgan, by deed dated August 2, 1920, and recorded in the Garrard County Clerk's Office in Deed Book No. 40, page 245.

The purpose of the sale is to divide the proceeds arising from the sale equally between the joint owners thereof.

TERMS:
The sale will be made on a credit of six months and the purchaser will be required to execute bond with approved security for the purchase price, due in six months bearing six per cent interest from date until paid, having the force and effect of a judgment upon which execution may issue, payable to W. H. Brown, Master Commissioner of the Garrard Circuit Court, and a lien will be reserved upon the property sold until all the purchase money is paid.
W. H. Brown, Master Commissioner Garrard Circuit Court.
J. E. Robinson, Att'y.
A. M. Bourne, Auctioneer.

CLEAN PENS ARE URGED FOR PIGS

Roundworm Held Responsible for Many Deaths and Large Proportion of Runts.

BADLY DRAINED LOTS CAUSE

Young Animals Farrowed and Kept in Places Infested With Eggs of Parasites Are Almost Certain to Pick Up Some of Them.

Investigations reported in a recent technical publication of the Bureau of Animal Industry, United States Department of Agriculture, disclosed additional evidence of the importance of keeping young pigs in clean pens that have not been contaminated by other swine.

A roundworm of pigs, known as Ascaris suum, is held responsible not only for many deaths among swine but for a large proportion of the runts among these animals. Development and perpetuation of the roundworm is fostered by badly drained and manure-covered hog lots, which are on this account dangerous to young pigs and not good for pigs of any age.

Soil May Become Infested. Eggs of the parasite may remain alive in soil for five years and even longer. Places occupied by pigs harboring the adult worms in their intestines will become badly infested with the eggs. Pigs farrowed and kept in such places are certain to pick up many of these eggs, and even suckling pigs are liable to swallow eggs present in dirt adhering to the teats of the sows.

Investigations by the bureau have proved that after the eggs have been swallowed and have hatched in the intestine the young worms do not immediately settle down but penetrate the wall of the intestine and travel to the liver and lungs. From the lungs they crawl up the windpipe and then down the esophagus and return to the intestine. Only after they have passed through the lungs do they establish themselves in the intestine and are ready to mature.

May Cause Pneumonia. In passing through the lungs the young worms cause more or less damage to these organs. Pneumonia may

Creep Arranged So That Young Pigs Can Get in the Pen Under the Fence but Large Hogs Are Kept Out.

result and the animal may die about a week or ten days after infection. Symptoms of this pneumonia among pigs are commonly known as "thumps." Not all cases of "thumps" come from this source but the worms are frequently the cause. Young pigs are more susceptible than older pigs to infection and are also more likely to suffer severely from migration of the young worms through the lungs.

There is no treatment for the lung stage of the parasite. If the pig survives he may later be treated with worm remedies to remove the worms from the intestine. In such cases, however, it commonly happens that the animal has been so seriously injured by the worms during their migration through the lungs that even after their expulsion from the intestines the pig is unable to make up for the setback he has received, although he does better than if allowed to go untreated.

FOWLS TOO FAT TO LAY EGGS

Ohio Specialist Says Hen Becomes Fat Because She Is Naturally a Poor Layer.

Can a hen get too fat to lay? is a question frequently asked by poultry keepers. In answer to this question L. L. Dickinson, poultry specialist at the Ohio State university, says: "As a general rule, no. A hen becomes fat because she is naturally a poor layer. Instead of laying eggs she lays on body fat. Some fowls which consist of corn and no animal protein, such as meat scraps and tankage, contain elements capable of producing eggs."

BIRDS MIGHTY GOOD FRIENDS

Farmer Is Amply Repaid for Trouble in Feeding and Sheltering Little Songsters.

What are you doing to protect and bring the birds to your place? Birds are mighty good friends of ours, and if we feed and shelter them, we are amply repaid for our trouble. Try it and see if it doesn't work out that way for you.

A Real Helper

By GENEVIEVE ULMAR

Dec. 18, 1920 Western Newspaper Union

She was a boon to the office. Aaron Pike had found her so, although he did not tell her that, deeming it poor business policy to show distinctive appreciation as to any one particular employee. He told his son Rawson, however, all about her. He had just graduated from college, and it was no wonder that soon success in the management of the business the older Pike had conducted for over twenty years, with fair monetary success and a record for integrity and prestige of which he was justly proud.

"This Miss Linda Dale is a new accession to our working force," explained Mr. Pike, "and she has made friends with everybody about here—junior and office boys included."

"What is her peculiar province, may I ask?" submitted the son, studying the young lady in question through the open office doorway.

"Unfettered and steadfast pleasantness on all occasions," came the prompt reply. "She is what you may call a 'smiling through' girl. When she came here it was on dull places with many little trickeries and jealousies."

"There was discontent and a lack of harmony," Miss Dale put in charge of the help, simply began to exude cheer, comfort and even the motherly and dissatisfied girls. She planned a new kind of luncheon for the hands. She made herself familiar with the worries and troubles, home and office, of the others. She began a stilling system that soon did away with very faces. Just glance over the group and observe how scrupulously neat and ladylike they all are, and how with their cheerful faces they make it pleasant for an utter stranger to enter the office."

"Yes, there is certainly a change since I was here six months ago," admitted Rawson. "Young, popular and I suppose, a happy home back of it all making the general environment of Miss Dale ideal."

"You never were more mistaken in your life," replied Mr. Pike, "I looked the girl up in a general way, and learned quite the contrary. She has an idle, dissolute father, and the entire home cure of two little children. There is no mother and they live very poorly, for the father dissipated all he can get hold of. For all their own narrowness of living sphere, however, Miss Dale finds time to engage in community welfare work in the vicinity of her home. A grand girl, Rawson, and when you take charge here don't spoil her."

"Why should I? How can I?" challenged Rawson, quite unconcernedly. He had been an indulged son, and in a measure it had made him selfish and indifferent as to any burdensome interest in others. His glance still sought that attractive face in the next room, however, and if he had confessed the truth he would have acknowledged that Miss Dale was quite charming and worthy of admiration.

Seeing that either father or son had anticipated, Rawson Pike was compelled to assume his father's place. The latter became seriously ill and it was necessary to send him to another climate. It was a bad time to spare the old man. Business troubles had arisen and Rawson found himself burdened with complications he had never dreamed of. The employees and the general public knew that this was the case and affairs were not what they had been. There were some days of uneasiness and gloom but Linda like the true business woman she was, sought an interview with the young man. She had been trusted by his father with a thorough knowledge of the business, and this proved a saving clause in a decidedly desperate condition of affairs.

"Mr. Pike," she said, "there is less call for being frightened or discouraged than for the use of grit, perseverance and cheerfulness. We must not wear sad faces or allow competitors to guess that we are in financial trouble. I have a schedule of our affairs all made out for your inspection, and I will work day and night to carry out a plan to tide over the present crisis."

Rawson woke up. So clear, so practical, so optimistic was Linda that the situation now presented gave every encouragement for hope and finally weathering the storm. Linda had a long talk with the employees. "The last one of them agreed to 'smile their way through,'" and the Pike office presented to anxious creditors and suspicious business rivals the semblance of a place where everything was going on prosperously. Linda's knowledge and advice proved of inestimable value to Rawson Pike. At times he could scarcely repress his admiration, gratitude and increasing liking to wards her.

"Victory," he announced, coming in to the office one day all aflame with excitement and gladness, and he waved triumphantly the last paid note of a very large amount. Then his eyes sought those of Linda longingly, tenderly.

"You have saved us, Miss Dale," he said. "Well and truly my father did not overestimate you."

He was very near to her. She was very dear to him. A fitting climax presented. In the exuberance of his joy he leaped over and kissed her.

"Will you let that seal our engagement?" he asked.

"Yes," answered Linda Dale, simply and clearly.

AT 2:30 P. M.

Dandy 5 room residence, excellent lots, the Brummett property on Campbell Street, facing West, adjoining the lot of Zanone, macadam st. Every needed out building. Dwelling has two porches, cellar and cistern, lights and water—a home for anyone or rents good and a safe investment.

NO PANIC IN SIGHT.

MONEY IS WORKING OVERTIME

and while it appears scarce is the time to buy. Lowering prices will require less money to conduct business, thus creating a surplus of money. The requirements of the public for lots and houses are ever on the increase so with the available supply of money that's sure to develop all real estate will advance as never before.

Lumber is scarce each year, labor is organized, who can expect either to ever be cheap.

BACK TO "NORMALCY"

The banks are all full of money! Look at their statements if you do not believe it. The price of many products have dropped to and below normalcy "over night." All may say liquidating periods are at hand—a normal supply of liquid capital is sure to follow.

"NORMALCY" DOES NOT APPLY

to REAL ESTATE—the quantity of real estate remains the same—the demand is EVER on the INCREASE and thus the "balance" hand or price indicator will continue to point upward its maximum heights no one knows. Possession given January 1st, 1921. TERMS EASY.

FRUIT JUICES HANDY FOR WINTER JELLIES

Pressure of Work During Hot Season Is Relieved.

Besides Being Excellent for Jelly and Homemade Drinks Juices Are Recommended for Use in Gelatin, Ice Cream, Etc.

The juice of such fruits as the grape, currant, blackberry, strawberry, raspberry, elderberry and cherry makes delicious, wholesome drinks. Fruit juices also may be canned and made into jelly when it is wanted during the winter. Winter jelly making relieves the pressure of work during the hot and busy fruit season. Sugar need not be added until the juice is served or until the jelly is made.

The following directions are given by the United States Department of Agriculture. Extract the juice by boiling the fruit with a very little water and strain through a jelly bag. To prepare the juice for canning pour it into bottles or jars which have been boiled for 15 minutes. Put these on a false bottom in a hot water bath. This may be a commercial canner or a container large enough to hold sufficient water. The water should reach the necks of the bottles and the shoulders of the jars. A cork stopper may be pressed into the neck of the bottle and left during the processing period or a cork after being boiled may be put in tightly.

If jars are used as containers put rubber caps in place and half seal. Process for 30 minutes at the simmering point. Remove put stoppers of bottles in tightly, and when cool dip the top of the bottle into melted paraffin or sealing wax. Equal parts of fruit and jam make a good mix. Freshly extracted the tops of the jars as soon as they are removed from the bath. Test for leaks and store in a dry, dark place.

Added from these use in making jelly and even these for homemade drinks. These fruit juices are excellent for use in gelatin, soups, ice cream, sherbets and other desserts. Those which are to be used in other ways will have a better flavor if sugar is added before they are bottled.

GOOD LESSON FOR BEGINNER

Specialists Outline Plan for Determining When Dough Is Ready to Be Put in Pans.

The bakers often have difficulty in telling whether the dough is ready to be divided into loaves and put into pans. A good rule is to measure its volume. Say home economics specialists of the United States Department of Agriculture. When it is ready to be made into loaves, the dough for each loaf, if made out of hardwheat flour should amount to three pints; if made from soft flour, to about 2½ pints.

The levels to which these masses of dough will reach in the mixing bowl can easily be distinguished before hand and marked. For illustration: If one pint of bread is to be made, before mixing it put three pints of water into the mixing bowl and mark the point at which the water comes. This will indicate the height to which the dough should rise.

When recipes direct that dough be allowed to double or triple in volume, it is convenient to have a measuring glass to determine the expansion. An ordinary kitchen will do, but a glass of similar diameter like a small jelly glass, is better. Before the dough is set to rise, mark off a small piece and mark it in the glass. Note the height to which it comes and mark the place it will reach when its volume has doubled or tripled as the case may be. For this reason the large loaves of bread and use it as an indicator.

CHEESE AND POTATO DISHES

Excellent Luncheon or Supper Dishes Served in Kitchen of Department of Agriculture.

The following excellent luncheon or supper dish is one tested in the experimental kitchen of the United States Department of Agriculture:

1 cup of washed potatoes
1 cup of milk
1 egg
1/2 cup of melted butter
1/2 cup of grated cheese

Boil the potatoes and milk together until thoroughly mixed. Add the egg and the salt and beat thoroughly. Finally add the cheese. Bake in a hot oven in a shallow pan or fifteen minutes.

A similar dish may be made by scooping out the inside of a baked potato and mixing it with cheese, as above. Fill the potato skin shell with the mixture, return to the oven, and bake until light brown.

HOUSEHOLD NOTES

Add a little ammonia to cut the grease when washing dishes.

In making an overdone of soft chicken, give body to the shoulder seams and the opening where the fasteners go by sewing them on tape.

A few drops of olive oil in the last rinsing water when the head is washed gives the hair a gloss without making it greasy.

Opportunity

By ALVAH J. GARTH

15th Western Newspaper Union

In a day Arnold Bruce found himself prominent in the eyes of his fellow citizens. He had led an easy-going, homelike life in Woodville, but always earned a good living, and some property and, by a curious switch in local politics, was elected as a candidate to the state legislature and was very proud and ambitious of the prospect.

It was of his motherless daughter, Myrtle, that he first thought when public business was thrust upon him. He had doted on her with a jealous love, and she had been a constant reminder of his mother's face. He had been a good father, but he had been a poor mother.

He had been a good father, but he had been a poor mother. He had been a good father, but he had been a poor mother. He had been a good father, but he had been a poor mother. He had been a good father, but he had been a poor mother.

He had been a good father, but he had been a poor mother. He had been a good father, but he had been a poor mother. He had been a good father, but he had been a poor mother. He had been a good father, but he had been a poor mother.

AID BOYS TO OWN PUREBREDS

Eighty Hampshire Gilts Distributed Among Club Members of Tipton County, Tennessee.

"A pig in a poke," generally signifies a bad bargain, but not to the members of the boys' club of Tipton county, Tennessee. These young business men are quite satisfied with the pigs they drew by lot on Saturday last from the Tipton county fair. Through the efforts of County Agent C. S. Holmes, worth who has been working in his efforts to perfect the pig club work and with the assistance of the American Hampshire Breeders' association, one of the eight hundred Hampshire gilts from Illinois. Then the boys' club members of the pig club gathered in convention to draw lots for their pigs.

The process is simple, but its effect upon impressionable boys is, when some and far-reaching. The boy naturally establishes a regular credit on his back, a real business proposition. The pig club members of the county are given a number which entitles him to the pig with the corresponding number among the 80 in the pen. Reports indicate that every boy secured absolutely sure that he had drawn the one best Hampshire in the lot, though a neutral person who examined the 80 pigs asserted that there was really very little difference among the animals. All weighed about 100 pounds, and all were pure bred. Hampshire gilts, beautifully marked in black and white, and of excellent build and conformation.

Each boy agreed to follow certain approved instructions in feeding and caring for the pig and to present a written report on a contest to be given in the county next fall. In the

Club Boy Watching His Pigs While at Pasture.

After his contract with his bank he will return two pigs from the first litter produced by his sow in discharge of his duty. The sow, the remaining pigs of her first litter and all the pigs of future litters become the property of the boy.

Economists argue that there is no real bargain, that one party or the other is always the loser. But it is hard to find that fault in the pig club boys' bargain. The banks get two pigs for one, the boys get a purebred sow and all her potential litters in return for the care and feed given the pig, and the county of Tipton is richer in one short year by two or three hundred purebred pigs. Elmer Shaw and the county agent, who jointly form a sort of third party to the transaction, have the satisfaction of knowing that 80 farm boys have been given a financial interest in agriculture and a primary business education which will mean success in later years.

HOW TO KEEP HOGS HEALTHY

Among Other Things, Provide Animals With Sanitary Quarters and a Clean Wallow.

To keep swine healthy and thrifty, provide them with sanitary quarters and a clean wallow. In addition to proper food. But when external parasites affect hogs, an effective remedy must be used if losses are to be avoided. It is and mange mites are the two principal kinds of external parasites occurring among swine. The mites are particularly injurious in 1920 and possibly overcast hogs. "Hog Lice and Hog Mange" is the title of a new farmers' bulletin recently issued by the United States Department of Agriculture, telling specifically how to identify the parasites and describe effective and economical remedies. Plans of hog wallows and dipping vats, together with directions for building them, are given. For information on this important subject, ask the Department of Agriculture, Washington, D. C., for Farmers' Bulletin No. 108.

SKUNK HIDES ARE VALUABLE

Circular Gives Suggestions for Making This Supposed Pest Into Profitable Friend.

Skunks yielded \$1,000,000 worth of hides to New York state farmers and hunters in one year. The United States Department of Agriculture, in a circular of the fur industry, gives suggestions for making this supposed pest into a profitable friend of the farmer.

MISSHOLLADAY'S CANDIES

STONES CAKES

In Time of Need

By T. B. ALDERSON

Gordon Keith had made a serious misstep in life and no one at Riverdale knew of it except Hugh Boone. Boone, to say the least, was a man of the deeds of the matter had taken Keith first into his employ and then had made him a partner in the bank.

Boone had advertised for a bank clerk in a periodical devoted to banking interests and Keith had come by train to Riverdale to apply for the position.

Boone was very greatly impressed with the candidate and was deeply surprised when the latter told him frankly that he had just finished a two years' term in a Canadian penitentiary. He had confessed to the crime of uttering a forged note to secure money, to save a class friend, who was himself the culprit. When he had finished all the details Gordon Keith extended his hand.

"I believe in you, I trust you, I take you into my employ," said this warmhearted, sympathetic man. "You were driven to your error by a situation even I could not have resisted under the circumstances. Let this never be alluded to again. I will be your lifelong friend if you desire it. I shall deserve it," declared Gordon Keith solemnly.

He kept his word. So valuable did he become in handling up the bank's affairs so straightforward in all his dealings that three years later he was given a one-third interest in the institution. It was Keith who secured the exclusive sale of a high quality soap of some utility, and through several large retail deals and the capital of the bank, and his personal share of the profits represented a small fortune.

Boone wondered who Keith did with his gains but never asked him about them. Either he kept them locked up in his private safe or he used them in countries in the city. One thing he did not do—that was to waste his money in extravagance. He continued to live at the large mansion of expense.

Mabel Boone was a girl of twelve when Keith first appeared in Riverdale. Her mother had died and she was sent to a distant institution of learning the president of which was a close friend. This meant a safe and congenial home for the young girl and she came home very rarely. At length at eighteen she graduated and returned to her real home permanently. She had grown into a creature of rare beauty and grace and as time went on Keith appeared to dislike this fair, lovely being, especially with her father. Every birthday or other occasion when it was possible Keith always bestowed upon Mabel some rich gift, so expensive in fact at times that Boone remonstrated with him.

"You will spoil her, Keith," he said, "and the money you spend on her would credit a millionaire."

"Oh, I have a very liberal surplus," Keith would say, quietly. "You know I am saving and economical, and you must not rob me of the greatest pleasure of my life."

There were times when Boone, noting that his daughter cared little for company outside of the family circle, and that she seemed to greatly cherish the little kindnesses and attentions of Keith, realized that a close attachment might come about for their ages were not unequal. He put the idea out of his mind, however, as he saw that both acted as though their companionship as their friends met their desire.

It was exactly eight years after Keith had become a partner in the bank that a period of general sickness spread over the country. One morning Hugh Boone awoke to find the street about him dark, foreboding, and almost desolate. There was a rumour of two other persons in the town and one of them at once died.

Mabel found it the morning she came down to the bank. She turned at once to her father, who was greatly agitated over the trouble that threatened. "It would be impossible to get all the ready cash needed from the city banks, under twenty-four hours."

Keith's face brightened at Mabel's name. He had been thinking of his partner in the bank and took Mabel's hand, gently and respectfully, conducting her to his private safe.

"Now dear little one, just open it and give me the combination."

The surprised girl followed his directions. Then Keith observed to his wife and perturbed partner at the side door sitting down.

"Help yourself my dear friend. You will find my savings of years in there, ready for your use."

Mabel understood and obtained her rightful share of the fund of the man who had saved the good name and the existence of the bank. As her eyes met those of Keith she lowered them instinctively and blushed.

It was the first announcement of hope she had ever given him and his heart beat wildly. Then, as Mrs. Boone hurried with a box of cash to the outer bank, Keith drew Mabel closer to him.

"My dear," he said, "I told you I loved you what would you say?"

"That I am glad and happy," was the low-toned reply, and Gordon Keith was content.

GROWING TIMBER WILL PAY WELL

Farmers Owning Small Tracts Will Find It Advantageous to Market Crops Together.

CASE IN NORTHWEST CITED

When Care Is Exercised in Selecting and Cutting a Woodlot May Be Made Source of Income for an Indefinite Period.

With the help of the Forest Service and the county agent, a number of farmers who live in Hargeman Valley, Wash., just north of the Palouse Division of the St. Joe Forest, are co-operating this year in the sale of about 2,000,000 feet of timber.

Last fall the Forest Service was requested to aid these farmers in disposing of a considerable amount of timber on their claims. It developed that there were approximately 200 settlers who owned about 200,000,000 feet of timber which they desired to dispose of as a unit in order to attract some company capable of handling the entire proposition. They were, however, unable to agree upon a satisfactory price. The project had been worked up by the local county agent, a former Forest Service man, from whom the request for help came.

Not Needed for Crops

The Forest Service agreed to make an appraisal of the timber and to assist in drawing up a contract and sale conditions. The appraisal was made last spring and a price fixed of about \$150 per thousand feet. Although the land is well adapted to agriculture, it will not be possible for its owners to put all of it into cultivation for a number of years. Consequently it is to their advantage to devote it to growing timber, with such time as it is needed for raising crops. The timber consists of yellow pine of a good quality and contains a large number of trees just below maturity. These trees will make rapid growth, and the old timber is to be removed. It is a case where it will pay the owners to grow trees. These facts were explained to the farmers of the association and the prospects for the advantage of handling the timber to the farmers recognized.

Farm Woodland After Thinning

In order to save the young growth they agreed to sell their 30 cents per thousand on the stumpage price.

Cooperation Is Favored

Farmers in general who own small tracts of timber will find it profitable to co-operate with their neighbors in marketing their growth. It is a fact that in many cases the timber is so scattered that it is impossible for the owner to dispose of it in any of his own means. When a number of farmers unite in selling their timber as a unit, they are able to attract the attention of a large company, which is able to handle the entire proposition.

PREVENT SPREAD OF DISEASE

Of Greatest Importance That Carcases of Dead Animals Be Buried or Burned

When it is considered that the spread of disease may be distributed to live stock, through the carcasses of dead dogs, pigs, chickens and that it is now, really, a question of the spread of disease, it is not surprising that measures of prevention should be taken. Most of these diseases are spread in close contact with the dead domestic animals and some have been transmitted to humans from the dead surfaces of the carcasses. It is known that the carcasses of dead animals may be a source of infection to the living stock and that the carcasses of dead animals may be a source of infection to the living stock.

QUITE EXPENSIVE OATS

The recent cost of producing a bushel of oats in Missouri this year was 75 cents, which does not include 7 cents a bushel for hauling to the elevator. The cost was figured at \$0.83, cost of planting at \$0.71 per acre, in a total cost of \$2.04, which equals 27 1/2 bushels.
